Our Seeds Grow Friends

1929

Order from

Washburn-Wilson Seed Co.

Or your local dealer

Moscow, Idaho
Better Packet Seeds

Our packets and cartons are put up for the gardener who uses only a small quantity of each variety. It is important that his planting should produce the maximum yield of high quality vegetables, if his garden is a success.

Our packets are prepared from highly selected seed stocks, with a strong vitality, and if given favorable growing conditions, will give you excellent returns. It is not the size of the packet or the lithograph that makes the crop, but The Seed Inside the Packet that counts.

Your local dealer can supply you with a complete line of our vegetable, flower, and lawn grass packets. Ask him for our packets for planting this season.

Prices Consistent With Quality

Washburn-Wilson Seed Co., Moscow, Idaho
TO OUR CUSTOMERS:

Your response to our catalog last season has permitted its enlargement this year. It is also possible for us to offer you a larger assortment of vegetables, flowers, shrubs, bulbs, and supplies from which to make your selection.

Look over our list of flower seeds and you will find many new annuals and perennials. If you are planning on larger plantings, take advantage of our bulk prices. In case you do not have the room in which to start perennials, you can secure a nice assortment from our list of plants, all of which should produce blooms the first season if planted early.

We have reduced the number of grades in our offering of field seeds to a minimum, because you want only the best and we do not want to carry inferior stocks. Our vegetable seeds have all been tested for trueness to type and we know that they will give you the kind of returns you expect.

One of our specials this year is the list of Gladioli. While this list is not so extensive as you may find elsewhere, we know that the stocks are of the best quality and all bulbs are No. 1 in size, disease-free, and true to name.

All that we ask is the opportunity to prove to you, that Our Seeds Grow Friends.

Very truly yours,

WASHBURN-WILSON SEED CO.

GARDEN SEEDS

Asparagus

One ounce of seed will produce 300 or more plants.

CULTURE—It will require two to three seasons to produce a marketable crop of asparagus from seed, but this method is often superior to root planting as better plants can be selected for the permanent bed. Plant the seed in rows 12 to 14 inches apart, thinning the plants to 4 inches and allow to grow until the second season. Transplant to the permanent bed with rows wide enough apart to permit cultivation. Fertilize heavily with well rotted manure.

MARTHA WASHINGTON—It is a superior variety for early market, producing white stalks of excellent quality. Our seed was selected especially for quality and resistance to rust.

PALMETTO—One of the old standard varieties but widely used. The stalks are greenish in color but of excellent quality, maturing early.

Beans

CULTURE—Plant in warm, loamy soil at the beginning of settled warm weather in spring at intervals for succession until August. Rows may be made two feet apart, and the beans planted a few inches apart in the drills, or three or four beans in hills six to eight inches apart. Cultivate andhoe frequently, always, however, when the vines are perfectly dry.

Green Pod Bush Varieties

GIANT STRINGLESS—The plants of this variety are similar to Stringless Green Pod but the pods are larger and more productive. It is ready for use with Stringless Green Pod.

EARLY RED VALENTINE—A choice variety for early use and the pods are green in color and of excellent quality, with few strings. A favorite for growth where moisture is limited.

EARLY REFUGEE—One of the popular shipping varieties, also suited to home growing. The pods are green, medium in size, and of good quality. Are later in maturity than Stringless Green Pod.

EARLY SIX WEEKS—One of the earliest green pod varieties for the home gardener. The beans are of excellent quality if harvested when quite small but become pithy if large. A choice variety for early home use.

STRINGLESS GREEN POD—This bean is one of the standard varieties for home gardeners and commercial planting. The plants are very productive and the pods of very good quality and free of strings.
GREEN POD BUSH VARIETIES—(Continued)

REFUGEE 1000 to 1—A late variety with green pods which are very slender and brittle, of good quality suitable for planting for late canning.

DWARF HORTICULTURAL—This bean is known as Bird’s Egg. It is grown for dry fall beans. The plants are medium early in maturing, the pods are green splashed with carmine and the seeds are large, round and marked with light red blotches. The dry bean is very rich flavored and is excellent for baking and cooking.

WAX PODDED BUSH VARIETIES

GOLDEN WAX—This variety is ready for use with Stringless Green Pod. The pods are medium in size, flattened and fleshy and of good quality. A good variety for the home garden.

PROLIFIC BLACK WAX—This black seeded bean produces a larger pod than the Pencil Pod Black Wax. The plants are medium early in maturity and are very productive.

PENCIL POD BLACK WAX—This black wax bean produces a very slender type of pod of excellent quality for canning and for market garden use. They are free of strings and are of rich flavor.

DAVIS WHITE WAX—This bean is among the earliest of the yellow pod varieties in maturity and produces large pods of excellent quality.

All Bush Beans

Pole and Climbing Beans

GREEN AND WAX POD VARIETIES

KENTUCKY WONDER—We consider this variety the most dependable pole bean for the home garden. It is very productive, the pods are large, of good quality and free of strings.

STRIPED OR WHITE CREASEBACK—These beans are late in maturing but superior for snap purposes. The plants are very hardy and yield well and the beans are of good quality.

LAZY WIFE—This bean has large oval white seeds. The plants are later in bloom than Kentucky Wonder but are suitable for green as well as for dry beans.

KENTUCKY WONDER WAX—A variety similar to the green pod Kentucky Wonder in habits of growth but the pods are bright yellow in color. The seeds are dark brown and somewhat wrinkled in appearance.

All Pole Beans

Lima Beans

IMPROVED BURPEE BUSH—A large seeded bush lima somewhat later in maturity than the Henderson bush. This bean will mature at lower elevations.

HENDERSON BUSH—A small seeded lima but very desirable for home garden where the season is somewhat short. It is very productive and the dry beans are in demand for market purposes.

POLE LIMA—A large seeded early variety suitable for planting where the season is long.

All Lima Beans
Beets

One ounce will sow 50 feet of drill; 5 to 6 pounds for an acre.

CULTURE—For early table beets, have drills 16 to 30 inches apart, and sow the seed about one inch deep, as early as the ground can be put in good shape. Give thorough and clean cultivation, and thin the plants to stand 4 inches apart in the rows. For succession sow at intervals until middle of July. For the earliest sowing a light dressing of nitrate of soda; say 100 lbs. per acre, will work wonders.

Table beets should be grown in every garden as they are produced with little effort and supply the table with greens as well as with excellent roots.

Table Varieties

EARLY WONDER—A selection from Crosby's Egyptian which is becoming a favorite variety with the market gardener. The roots are somewhat flattened but uniformly dark red in color and of good texture. We recommend our stock for market garden trade.

EARLY BLOOD TURNIP—A globe-shaped variety which is somewhat flattened. The roots are bright red in color and of uniform texture.

DETROIT DARK RED—One of the favorite varieties for canning and slicing. The roots are medium in size, and globeshaped and are early in maturity.

EXTRA EARLY EGYPTIAN—A popular variety used for early planting. The roots are distinctively flattened, the flesh dark red in color with zones of light red.

ECLIPSE—A cone shaped variety producing uniform roots of bright red color. The flesh is zoned with pinkish white layers.

All beets 5c 15c 25c 75c $2.85

Stock Beets and Mangels

Early planting is important on non-irrigated land because of the difficulty in securing a satisfactory germination. The seed should not be planted too deep and the ground should be rolled after planting to pack the surface soil. Later planting can be done under irrigation with favorable results.

DANISH SLUDSTRUP—This Mangel grows a large portion of the root above the surface soil. The roots are reddish yellow in color, attaining a large size when fully matured.

GIANT INTERMEDIATE—A variety similar to the Sludstrup but generally considered of higher sugar content and more popular for stock feed.

GOLDEN TANKARD—The roots of this Mangel are cylindrical in shape and of a deep orange color. This variety is rich in flavor and of high sugar content.

IMPROVED MAMMOTH LONG RED—This variety grows well above the ground and produces a dark red colored root. It is a favorite with many growers.

GIANT HALF SUGAR ROSE—We consider this one of the best for stock feeders because of its yield and excellent feeding value. The skin is rose colored and the flesh white.

Postpaid Prices, 3rd Zone

1 oz. 3 oz. 1 lb. 5 lbs.
All Mangels 10c 25c 75c $3.00
Carrots

One ounce will sow 100 feet of drill; 3 to 4 lbs. for an acre.

**CULTURE**—Some growers plant Carrots and Radishes in the same row, seeding them thin enough so that as the radishes are removed for early use, the carrots fill in the space and continue growing until fall. This conserves space in the small home garden.

**Table Carrots**

**DANVERS HALF LONG**—One of the most popular carrots because of its being well known. The roots are tapering from the shoulder and are bright orange in color. On heavy soils it is inclined to break off in harvesting. Where this difficulty is likely to occur, the Chantenay or Oxheart should be used.

**CHANTENAY**—We recommend this variety very highly for the market garden trade as well as for home use. The roots are tapering and stumped at the base making them more easily harvested in heavy soil. This variety is equal to the Danvers Half Long in quality and is productive.

**OXHEART**—A short stump rooted variety, very popular for planting on heavy soil. Also suited to early harvest for market purposes.

**SCARLET HORN**—This variety is very early and grown extensively for summer use. The roots are about two inches in length, reddish orange color and of choice quality.

**Stock Carrots**

**LONG ORANGE**—This variety is grown more extensively for stock feeding than the White Belgian and is very popular because of its color, size and yield. It produces a large root, growing entirely under the surface of the soil and produces a heavy yield where moisture is plentiful.

**WHITE BELGIAN**—As some growers prefer a white carrot, we offer this as the best variety for stock feeding. A portion of the root grows above the soil but it is easily harvested and is of good feeding value.

**Celery**

One ounce will produce 5,000 plants.

**GOLDEN SELF-BLANCHING**—A very early variety, requiring little labor to blanch. The plants are stocky, medium in size, with golden heart and light yellowish green outer leaves. Very tender and crisp, in demand on the market.

**WHITE PLUME**—An early main crop variety, suitable for fall and winter use. The leaves are bright green with light tips, the inner leaves turning white as the plant matures.

**Postpaid Prices**

| All Celery.....Pkt. 5c; 1 oz. 50c. |

**Cauliflower**

One ounce will produce 3,000 plants.

Our Cauliflower seed is imported.

**CULTURE**—For early cauliflower sow seed in hot bed and transplant to cold frame 2 inches each way. Set plants in permanent garden same as cabbage. To blanch draw leaves about the head and tie with tape.

**EARLY SNOWBALL**—Our strain of Snowball is especially selected for uniformity, early maturity and quality. The heads are large, solid and suitable for early market use.

**DANISH DRY WEATHER**—While this variety is somewhat later than Snowball it is quite resistant to drought. It is equal in quality and yield.

**Postpaid Prices**

| All Cauliflower Pkt. 5c; ½ oz. $1.00 |
Cabbage

Sow one ounce for 2,000 plants; four to six ounces for one acre.

CULTURE—For plants of the earliest sorts, sow seed in January or February under glass and transplant into flats 2 inches apart. Set out as early as season will permit, spacing the plants 24 inches apart in the row and rows 3 feet to permit cultivation.

For late plants, the seed may be sown as late as June, planting in the permanent location. These late plants will make the greater part of their growth in the early fall.

EARLY JERSEY WAKEFIELD—One of the earliest varieties for market, producing conical shaped heads. While the heads of this cabbage are not as large as those of the Flat type yet it is valuable for its earliness.

EARLY WINNINGSTADT—This cabbage is similar to the Jersey Wakefield but the leaves are twisted toward the top of the head.

GOLDEN ACRE—We consider this the best variety for early market use. It is a selection from Copenhagen Market. The heads are round, very compact, solid and early in maturity.

COPENHAGEN MARKET—One of the standard varieties of flat headed cabbage for medium early use.

EARLY FLAT DUTCH—This cabbage is similar in type to the Late Flat Dutch but has been selected for early maturity.

LATE FLAT DUTCH—A very popular variety for early fall and late summer use. The heads are large, round and flattened but very firm.

DANISH BALLHEAD—Our strain of Danish Ballhead produces very large, round firm heads. An excellent cabbage for winter use.

DANISH DARK RED—A desirable cabbage for use in salads and for decoration, as the leaves are dark red in color and very attractive. The heads are large, solid and late in maturity.

PE TSAI (Chinese Cabbage)—This cabbage somewhat resembles the Cos Lettuce as the leaves are quite loose and open. It has a cabbage like flavor and is used in salads.

Brussels Sprouts

A member of the cabbage family, producing a tall stalk, upon which are borne many small cabbage-like heads. A very tender and palatable vegetable. The crop should be grown and handled like a late variety of cabbage.

Swiss Chard

Four pounds per acre required.

Every home garden should contain a few rows of this leafy vegetable. The top only is suitable for food, using the tender leafy portion for greens. The plants grow rapidly and produce a good crop early in the spring before other leafy crops are ready. Poultrymen grow this crop for green feed for use during the early spring for stock not having access to open range.

LUCULLUS—This leafy variety produces large curly leaves with tender white stems. If cut often will continue to produce until hot weather.

Cucumbers

One ounce will plant fifty hills; two pounds will plant one acre.

CULTURE—For very early cucumbers, sow April 1st, in a hotbed upon pieces of soil (grass side down), so that they can be readily transplanted to the open ground, in rich soil, when danger of frost is over, or protect by single window panes. For early use, plant if the weather has become settled and warm, in hills 4 to 6 feet apart each way; thin out to four of the strongest plants to each hill, after all danger of insects is over. Cucumbers should be gathered when large enough for use, whether required or not, if left to ripen, it destroys their productiveness.

BOSTON PICKLING—One of the best known varieties for general use. The fruits are short, of medium size and suitable for pickling as well as slicing. Is early and very productive.

DAVIS PERFECT—We recommend this variety as one of the best general purpose cucumbers. The fruits are dark green in color tapering toward the ends, of good size and excellent quality. A choice variety for market.

EARLY CLUSTER—The fruits of this variety are small in size and desirable for pickling.

WHITE SPINE CUCUMBERS

IMPROVED WHITE SPINE—One of the earliest of the Spine varieties with medium large fruits of mild flavor and crisp quality.

IMPROVED LONG GREEN—This variety is generally grown for commercial use as a slicing cucumber. It is medium late in maturity, the fruits are long and tapering and of dark green color.

LEMON CUCUMBER—A variety with lemon shaped fruits and medium early in maturity.

JAPANESE CLIMBING—This variety is often used for planting along fences and trellis as it produces long runners. The fruits are of excellent quality for pickling and salads.

Sweet Corn

One pound will plant about 100 hills; eight lbs. per acre.

CULTURE—While the sweet varieties mature earlier than field corn, it is well to take some risk in early planting. Plant as early as the ground can be worked into good condition, as a slight frost will do but little damage to the plants. The early corn can be forced to supply the early market and by successive planting, produce throughout the latter part of the summer. The seed should be planted in hills 3 feet apart each way, covering just deep enough to insure moisture for germination. If planted early, increase the number of grains to the hill and later thin to 3 or 4 plants to the hill.

It is advisable to sow several short rows in planting any variety to insure better fertilization and development of ears, rather than a single row across the garden. An early variety planted about every two weeks during the early part of the season will give a long harvest period. In case it is desired to plant the entire crop early, the proper choice of varieties will produce a successive crop.

PEEP O'DAY—While this variety of corn is very small in size it is the earliest variety we have found for home use. Several ears are produced on each stalk and the corn is very sweet in flavor.

WHITE COB CORY—Our strain of Cory is only a few days later in harvest than the Peep 'ODay and is desired by many because of the larger sized ears. An excellent variety for early market.

EARLY MINNESOTA—One of the old standard varieties for home use. It is slightly earlier than Golden Bantam, producing large white ears.

EARLY EVERGREEN—Our strain of Early Evergreen is ready for market at the same time as Golden Bantam. The ears are long, with medium deep kernels. A fine variety for commercial market.

GOLDEN BANTAM—By far the most popular variety for home gardeners and commercial use. The stocks are medium tall with ears from six to seven inches long, generally producing eight rows of corn. The corn is a beautiful golden yellow color and is very highly flavored.

BLACK MEXICAN—Many market gardeners prefer Black Mexican for market following Golden Bantam. The matured grains are purple in color but the grains are white when the corn is in proper condition for market.

STOWELL'S EVERGREEN—This medium late variety is used for late market. It is often planted for stock feed in the early fall. The stalks are very leafy, medium tall and excellent for stock feed.

COUNTRY GENTLEMAN—This late variety will not mature at higher elevations but can be grown for late market use in irrigated sections at low elevations. The grains are produced in irregular pattern on the cob.

GOLDEN GIANT—Our strain of Golden Giant follows Golden Bantam in harvest. The plants are larger, the ears run from ten to twelve rows of kernels. An excellent market variety.

**Lettuce**

In producing head lettuce for the commercial market it should be planted very early in the spring thinning the plants just as soon as possible so that they will head properly. If the plants are spaced about one foot apart in the row and weather conditions are satisfactory, they will head rapidly. It is advisable to fertilize head lettuce with Nitrate of Soda after they have been thinned, to hasten growth. In some localities early fall seeding can be made so that the crop can be harvested in October or early November.

**BLACK SIMPSON**—A leaf lettuce of early maturity with very crisp light green leaves and black seeds.

**EARLY CURLED SIMPSON**—This white seeded variety produces very curly light green leaves of fine quality. A favorite for early garden use.

**GRAND RAPIDS**—Market gardeners growing lettuce under glass generally prefer this variety. The leaves are long, golden green in color, very crisp and tender. It can also be grown out-of-doors but is likely to burn if the weather is extremely hot.

**PRIZEHEAD**—This lettuce is a better leaf variety than it is for heading. The leaves are of medium green color tinged with brown toward the outer edge. The heads are very loose and open. It is a choice variety for early spring use.

**HANSON HEAD**—We recommend Hanson Head for the home garden as the heads are very select and of fine quality. It is lighter green in color than the New York head but does not stand shipment well.

**SPECIAL NEW YORK**—We are certain that you cannot find a better stock of lettuce than our SPECIAL NEW YORK strain. All of our seed has been selected for uniformity of type, quality and yield and comes direct to us from our special grower in sealed bags. We can supply it to you in pound quantities or larger amounts under our own seal so that we are sure of genuine "SPECIAL NEW YORK."

**CHICKEN LETTUCE**—A large rank-growing lettuce developed especially for poultry feed. It can be sown in the garden and cut for poultry use or planted in the poultry yard allowing the poultry to harvest it when ready.

**PARIS COS**—A compact headed variety with large oval shaped leaves. This variety is used for salads and has a distinctive flavor.

**Mustard**

One ounce will plant 100 ft. of row; three lbs. per acre.

**CULTURE**—Mustard may be sown early and in succession for continuous crop. Sow in rows on a fine but firm seedbed, thinning the plants to 4 inches in the rows. The tender leaves may be cut from the stalks and by careful harvest will reproduce for later crop. A fine succulent vegetable for greens and salad.

**GIANT SOUTHERN CURLED**—An excellent variety for greens. It makes a rapid growth of tender, spicy leaves, retaining its crispness until nearly matured.

Postpaid Prices, 3rd Zone

Mustard..........................Pkt. 5c; Oz. 10c; 3 oz. 25c; 1 lb. 85c
Muskmelons

One ounce will plant about 50 hills; two to three lbs. in hill per acre.

CULTURE—Melons thrive best in a light rich soil. Plant early in May, when the ground has become warm and dry, hills 5 to 6 feet apart each way for muskmelons, 8 to 10 feet for watermelons. Previous to sowing the seed, mix a shovelful of well rotted manure in each hill, and plant in each 12 to 15 seeds, after all danger of bugs is over, thin out to three or four plants per hill. A few hills for early use may be had by sowing on pieces of sod in a hotbed, and when warm enough transplant to open ground.

POLLOCK 10-25—One of the best melons for early commercial use. It is similar to the Rockyford on the surface while the inside color is greenish with salmon tint.

GOLD LINED ROCKYFORD—A main crop variety of delicate flavor. It is similar to Rockyford but the flesh has a salmon tint near the seed cavity.

EXTRA EARLY HACKENSACK—A green fleshed melon of medium size, used generally in the home garden. The fruits are flattened and distinctively ribbed and of good quality. Not a good shipping melon.

BURREL'S GEM—Our Burrel’s Gem has been selected for trueness to type and uniformity in size. The melons are oval in shape with very thick orange flesh. A fine main crop for commercial planting.

ROCKYFORD OR NETTED GEM—One of the old standard mid-season commercial melons. The fruits are oval round in shape with distinct netting over the surface. The flesh is green in color and of delicate flavor.

OSAGE or MILLER'S CREAM—A rather late variety ideal for home use. Fruits are egg shaped having salmon color flesh.

HEARTS OF GOLD—A delicious melon maturing in mid-season with fine shipping qualities. The fruits are oval with distinct ribs and netting over the surface. The flesh is very thick, of beautiful gold color with a small seed cavity.

BANANA—Banana melon receives its name because of its shape tapering toward the end. The skin is lemon yellowish color and the flesh is pink and of delicious flavor.

HONEY BALL—A very popular melon in the southern states but can be grown in the lower elevations in northern latitudes. It was developed by crossing the Casaba with the Cantaloupe and has an indistinct netting over the surface to the greenish color of the Casaba. It is a good shipping melon.

GOLDEN BEAUTY—A globe shaped Casaba with wrinkled skin. The fruit has a golden yellow color and the flesh nearly white. While rather late in maturity it keeps well in storage for late fall use.

HONEYDEW—The skin of this melon is somewhat of a creamy yellow color the flesh light green and of delicious sweet flavor. A late variety but a good keeper.

**Watermelons**

**Kleckley Sweets**—One of the best commercial melons because of its shipping qualities and yield. The melons are oblong in shape with uniform dark green skin and dark red meat.

**Ice Cream or Peerless**—This is a white seeded melon and is similar in shape to the Kleckley. The skin is light green in color and mottled, the flesh is of bright red color.

**King and Queen (Black Seeded Ice Cream)**—This melon is generally planted for late summer use and will keep well until late fall if stored in a cool dry place. The melons are oval in shape with light yellowish green skin brilliant red flesh and dark seeds.

**Halbert Honey Melon**

**Halbert Honey**—A variety largely used by market gardeners. Flesh is bright red with a deep green colored skin. A good shipping melon.

**Phinney's Early**—A desirable early melon for home use. Is oblong in shape with mottled green rind and bright red flesh.

**Black Seeded Chilián**—We consider this variety one of the best for the home garden as it is medium in size, round with deep green colored skin striped with lighter green and bright red flesh. A very sweet, juicy melon.

**Golden Honey Melon**

**Golden Honey**—Many growers prefer this yellow fleshed melon because it adds variety to their planting. Melons are about the size of the Kleckleys with mottled skin and golden yellow flesh. While the meat is somewhat coarse in texture the flavor is very sweet. The seed of this melon does not produce a perfect stand of yellow melons as some red fleshed melons will occasionally develop.

**Klondike**—This melon is used by many home gardeners and as a commercial melon. It has a very firm flesh of high quality and stands shipment well.

Our stocks of seed are selected for the critical market garden trade and we are anxious for you to use them. Prove to your satisfaction that they are better than the ordinary seeds often found on the market.

If you use larger quantities of seed than are priced in our catalog, write us for delivered prices on larger quantities.

Our service department should be able to help you, write us about your problems.

**Cole’s Early**—A small round melon which will ripen where the season is very short.

**Georgia Rattlesnake**—A rather late variety with mottled skin and good flavor. Generally planted in sections where the growing season is long.

**TOM WATSON**—A standard cylindrical melon of large size and fine shipping quality.
Onions

One-half ounce will plant 100 ft. of row; four pounds per acre.

CULTURE—Onions require a very finely prepared seed bed well enriched and with moisture near the surface. It is useless to plant seed in a loose, cloudy seedbed as the seed will not germinate, as only a thin stand of weak plants will result. They should be planted early and at a depth of one half to one inch, pressing the soil firmly over the seed.

AUSTRALIAN BROWN—An old favorite variety desired because of its keeping qualities. The skin is very dark brown in color and flavor fairly mild.

OREGON YELLOW GLOBE—We recommend highly our stock of Oregon Yellow Globe as all of the seed bulbs were selected for uniformity, mild flavor and keeping qualities. It is as satisfactory for commercial planting as Mountain Danver and superior to the Yellow Globe Danvers.

PRIZETAKER — A fine onion for planting on irrigated land. The bulbs grow to a large size, usually weigh two to three pounds. The flesh is pure white and the skin a light yellow. A fine onion for shipping or storage.

SOUTHPORT YELLOW GLOBE—This Globe shaped variety is rather late in maturity and has a mild flavor and is a good keeper.

YELLOW FLAT DANVERS — Some growers prefer the flat type of onion and we offer this stock of seed for your requirements.

GIANT GIBRALTAR—This commercial onion is similar to the Sweet Spanish with light color skin and very mild flavor.

WHITE PORTUGAL OR SILVER SKIN—This onion is a flat bulb with silvery white skin. It is grown for early green onions and pickling. Market gardeners plant this variety in mid-summer allowing it to grow through the winter for the development of green onions for early spring use.

SWEET SPANISH—One of the best commercial onions for irrigated sections where the growing season is long. It produces a white onion and a light yellow skin. Our seed stock has been selected especially for the market garden trade.

Bermuda Onion Plants

Grow your onions the New Way, by planting small Bermuda plants. These small plants are produced in Texas by planting the seed early in the spring and as soon as the plants have grown to a height of 6 inches, the plants are pulled, the tops cut off and packed in bundles of 100 plants each. These plants are then sent through by fast express and are ready for planting. Many growers used them last season in place of seed and are most satisfied. The plants were set out in April and onions weighing 1 1/2 lbs. were produced by August last, with only 2 inches of rain during the period. These Bermuda onions are large, flat in shape and of mildest flavor.

Bermuda onion plants should be grown for late summer use as they do not keep well during the winter season. There is little difference between the two varieties so far as yield and flavor is concerned. The Bermuda has a yellow skin while the Crystal Wax has a silvery white skin. In filling orders we do not distinguish between the two except where your order specifies a certain variety.
Onion Sets

YELLOW STRASSBURG—We have found this variety produces the best quality of sets as the onions are firm and uniform in size and free of dry wrinkled tops. These sets will develop into good onions for summer use if the seed stalks are pinched out while young.

WHITE PORTUGAL — Our white onion sets are of small size and of very best quality.

Postpaid Prices, 3rd Zone
All Onion Sets......1 lb. 25c; 2 lbs. 35c; 5 lbs. 80c; 10 lbs. $1.50

If you do not specify a certain variety we will fill your order with Yellow Strassburg sets.

Okra

Okra is a fine vegetable for use in soups and as a green vegetable. Should be planted after frost is over, thinning the plants early. The pods should be harvested before they become fibrous and woody.

WHITE VELVET—A taller variety maturing early. The pods are somewhat white in color and are long, smooth and tender.

DWARF GREEN—A very compact growing, heavily branched variety, producing a mass of pods. It is very early in maturity and the pods are of fine quality.

Postpaid Prices, 3rd Zone
All Okra...... Pkt. 5c; Oz. 15c; 2 oz. 25c; lb. 75c

Parsnips

One-fourth ounce will plant 100 ft. of row; three pounds per acre.

CULTURE—Sow as early in the spring as the weather will permit, in drills 18 inches apart and 1½ inches deep, in a rich deep soil; thin out 5 to 6 inches apart in rows, the quality of the roots is improved by leaving them in ground over winter for spring use. Secure enough in pits or cellars in the fall for immediate needs.

HOLLOW CROWN—A very popular one for market and home use. The roots are large, tender, crisp and very sweet in flavor.

Postpaid Prices, 3rd Zone
Parsnip Pkt. 5c; Oz. 15c; 2 oz. 25c; lb. 80c

Peppers

Ruby King Peppers

RUBY KING—A very satisfactory variety for home and market gardeners. The plants are early, dwarfed in habits of growth, the fruits large with thick flesh, very sweet and mild and of bright red color.

CHINESE GIANT—One of the largest varieties of peppers. The fruits are thick, bulky, and of large dimension and medium early in maturity.

LONG RED CAYENNE—A hot, spicy pepper producing long, slender fruits which are twisted at the end. Medium late in maturity.

Postpaid Prices, 3rd Zone

Chinese Giant 5c 40c 1.10 6.00
Long Red Cayenne 5c 40c 1.10 6.00

Long Red Cayenne Peppers
Garden Peas

One pound will plant about fifty feet of row.

CULTURE—Peas of the extra early smooth class are the very first thing to be planted in the garden in spring. The wrinkled sorts follow a little later, as they are not quite so hardy. Tall, late varieties need brush or other support. By selecting sorts that do not grow much over two feet high, the necessity of providing brush may be avoided. Judicious selection of varieties and planting frequently for succession will give a full supply of the choicest green peas almost during the entire season, with the possible exception of the hottest part of the summer. Open furrows three or four inches deep and three apart; scatter the seed peas into them and cover with hoe. Cultivate like corn or beans. The late tall sorts may be planted in double rows placing brush between for support.

The majority of the pea varieties we offer are grown in the Palouse section of eastern Washington and northern Idaho and are handled under the direct supervision of Mr. Kennard, the President of our Company. We are pleased to give you the following suggestions as to choice of varieties as a result of our experience and observation: Do not plant home grown seed that has not been treated to kill the pea weevil because it is a source of infection for your neighbor and will result in serious loss to yourself as well. All of our seed is fumigated before being cleaned and hand-picked.

Varieties for the Market Garden

Mid-Early—Semi-Dwarf, Gradus, Premium Gem, Thomas Laxton.
Late Dwarf—Dwarf Telephone, Stratagem.
Late Tall—Tall Telephone.

Varieties for Home Garden

Mid-Early—Gradus, Premium Gem.
Late—Dwarf Telephone, Stratagem, Green Admiral Horsford, Perfection, Tall Telephone.

DUKE'S DELIGHT—We offer this pea for your approval, as it is one of the finest early varieties we have grown. The plants are from 15 to 18 inches tall, the crop developing with American Wonder, but requiring a longer period to reach full maturity. The pods are straight, large and blunt, varying from 3 to 3½ inches in length, from 7 to 9 seeds per pod. A fine variety for market and home use. We have grown Duke's Delight together with Little Marvel and find the two stocks identical in characteristics.

ALASKA—A very hardy variety for early planting. The seeds are small and of finest quality for canning and the entire crop is ready for harvest at the same time. Plants 2 feet in height.

LAXTONIAN (Blue Bantam)—Our stock produces very large pods curved at the end, averaging 3½ to 4½ inches in length. The plants are 15 to 17 inches tall, producing 4 or 5 pods each. One of the finest market garden varieties because of earliness and size of pod.

AMERICAN WONDER (Dwarf) — The standard dwarf early variety for the home garden. The plants are bushy, producing a large number of pods, which are straight and blunt and well filled with large purple peas. Fine choice of seeds can be made in the home garden and the quality is excellent.

AMERICAN WONDER (Tall) — Our strain of Tall American Wonder was developed by selection to secure a plant which would be somewhat taller than the regular American Wonder. Our strain grows to a height of 15 to 20 inches producing pods similar in type to the Dwarf variety. It is ready for use about five days later.

PREMIUM GEM—When sown at the same time as American Wonder the crop blooms about five days later but is not ready for use until about ten days after the American Wonder is ready for picking. Plants are from 25 to 30 inches tall producing a medium sized pod with fine quality peas.

GRADUS—A second early variety growing to a height of 30 inches. The pods are large like the Laxtonian and the seeds very sweet and tender. A favorite for market purposes as well as the home garden.

DWARF TELEPHONE—One of the best late varieties because of its dwarf habits of growth and large pods.

TALL TELEPHONE—A tall variety maturing with the Dwarf, with very large pods. It should be trained on stakes for best results.

THOMAS LAXTON—This mid-early variety is similar in habit of growth to the Gradus. The pods are blunt on the end instead of curved. A fine pea for the general market.

STRATAGEM—A late variety desired by market growers, growing to a height of 2 feet, with large curved pods and dark green foliage.

We can supply any of the following additional varieties, description being omitted.

Green Admiral First and Best Horsford Market Perfection Melting Sugar White Marrowfat Sutton's Excelsior Claudia

Pumpkins

One-half ounce will plant 100 ft. of row; three to 4 lbs. per acre.

CULTURE—Pumpkin should not be planted until danger of frost is over. They may be planted alone in hills or hills scattered through corn fields where the stand of corn is somewhat uneven. A few seeds sown in each hill will produce sufficient vines for a heavy yield. If planted alone, the hill should be spaced 4 to 6 ft. each direction. A few pumpkins grown for winter use will serve for pies and the smaller ones will make fine jack-o’lanterns for the kiddies during the fall months. Field pumpkins are ideal feed for livestock.

SUGAR OR PIE—An early maturing variety with medium sized fruits slightly flattened at the ends and of golden color. The flesh is thick and of excellent quality for canning.

CONNECTICUT FIELD—This pumpkin is used principally for stock feed because of its large size. The fruit is longer and larger than the Sugar Pumpkin and the flesh is of somewhat coarser texture.

Spinach

One ounce will plant 50 ft. of row; ten pounds per acre.

CULTURE—For spring and summer use, sow in drills one foot apart and one inch deep, as early as the ground can be worked, and every two weeks for a succession. For winter and early spring use, sow in September in well manured ground; cover with straw on the approach of severe cold weather. The ground cannot be too rich. The stronger the ground the more delicate and succulent will be the leaves. Light applications of nitrate of soda have often a magic effect on spinach.

BLOOMSDALE SAVOY—This spinach produces large, thick, deeply wrinkled dark green leaves. Used principally for early spring planting.

LONG STANDING—This variety does not go to seed as rapidly as other spinach. While the leaves are smaller than those of the Bloomsdale, it is desirable for late spring planting.

IMPROVED THICK LEAVED—A variety preferred by market gardeners for fall seeding and is equally satisfactory for spring planting. Leaves are bright green in color somewhat round and of choice quality.

KING OF DENMARK—This spinach is a rank grower with deep wrinkled dark green leaves. It appears quite resistant to extreme hot weather conditions.

VIROFLAY—A variety suitable for spring or fall planting. The leaves are very large and arrow shaped. Desirable for canning because of its clean up-right leaves.

Radishes
One ounce will plant 100 feet of row; ten lbs. per acre.

CULTURE—Sow early and often. In good, warm loam, especially if quite sandy, summer radishes will make a crop in four to six weeks from sowing. The soil should be well prepared and fertilizers may be used freely. Have the rows a foot apart, and sow just enough so that they will not require thinning. The short turnip-rooted sorts are quickest and easiest to grow and also good for forcing. Use fertilo Worm Repellant to control root maggots.

CRIMSON GIANT
—We consider this one of the best varieties for a commercial crop because of its size and quality. It does not become pithy as soon as other red varieties. It is globular in shape and has a bright red skin.

EARLY SCARLET WHITE TIP—One of the favorite varieties for the home gardener because of its crisp quality and early maturity. A turnip shaped radish with scarlet top and white tip.

EARLY SCARLET OLIVE—This early radish has an olive shape, a bright scarlet color and white flesh.

FRENCH BREAKFAST—One of the old standard varieties, rather oblong in shape and suitable for early use.

WHITE ICICLE—A standard variety for market and home use because of its attractive appearance and uniform shape. It retains its quality if planted early in the season.

LONG SCARLET—A scarlet variety similar in shape to the Icicle but growing a more slender root.

SCARLET GLOBE—One of the earliest varieties, having a globe-shaped root, very crisp and tender.

Postpaid Prices, 3rd Zone
All Radishes Pkt. 5c; 1 oz. 15c; 2 ozs. 25c; 1 lb. $1.00

Rhubarb
One ounce will produce about 700 plants.

CULTURE—Plant the seed in rows at least one foot apart and thin the plants to about 5 inches in the row. As the stronger plants develop, thin out the weak ones and cultivate throughout the season. In the spring of the second year, transplant to a well manured plot, spacing the plants about 4 feet each way. Give plenty of cultivation, water and fertilizer for a rapidly grown crop.

VICTORIA—A large stalk variety which grows rapidly and is very succulent and free from fiber.

Rhubarb 5c 20c 50c $2.00

Rutabagas
One half ounce will plant 100 ft. of row; three lbs. per acre.

CULTURE—Rutabagas, like turnips, may be sown in early spring for summer use or in late summer for fall and winter. For early crop, sow in rows and thin to 4 or 5 inches. The full crop may be sown broadcast on clean ground, after early crops have been harvested. Our stock of Rutabagas is foreign grown and of highest quality.

AMERICAN PURPLE TOP OR YELLOW SWEDE—The most popular and generally grown varieties with yellowish skin distinctly colored with purple at the top. The flesh is very white and of mild flavor.

BANGHOLM—Preferred by many as the neck is slender and tapers toward the root, making it more easily cut off at harvest.

Postpaid Prices, 3rd Zone
All Rutabagas—Pkt. 5c; oz. 15c; 3 oz. 40c; lb. 90c; 5 lbs. $3.75
Squash

One-half ounce will plant 100 feet of row; 2 to 3 lbs. per acre.

CULTURE—Plant in well-manured hills, the bush varieties four feet apart each way, the winter sorts ten to twelve feet each way. Use seed freely, 8 to 12 seeds to the hill, to provide for losses by insects. When danger of such loss is past, thin to two or four plants to the hill. To repel the squash vine borer, throw a handful of tobacco dust close around the plants. For yellow-stripped beetle and blight, spray early and repeatedly with Arsenate of Lead Mixture.

Summer Varieties

WHITE BUSH SCALLOP—More summer squash should be grown as they supply the green vegetables during the season when much of the garden has passed its prime. The fruit of this squash is scallop-shaped, white in color and of high flavor.

YELLOW BUSH SCALLOP—These squashes are of golden yellow color and of similar shape to the white Bush. They have a distinct flavor and are excellent for table use during the early summer.

YELLOW SUMMER CROOKNECK—The fruits of this variety are elongated and somewhat warted and crooked toward the point of attachment. They should be used before they attain maximum growth.

Fall and Winter Varieties

TABLE QUEEN—We recommend this variety for the home gardener who desires a small squash for winter use. It is especially desirable for use by small families as the squash can be utilized more efficiently than the large varieties. The fruits are acorn shaped, dark green in color and distinctly ribbed with solid yellow flesh. They keep just as well as the Hubbard squash and have a better flavor.

BANANA—The skin of this squash is grayish green in color and the fruits long and tapering toward the ends. The rind is not so hard as in the Hubbard. A good keeper.

GREEN HUBBARD—An old favorite winter variety. These squashes are slightly warted, dark green in color with a thick heavy rind.

MARBLEHEAD—Mature at the same time as the Green Hubbard. Skin is light green in color. This variety is grown commercially in many irrigated sections.

Salsify, or Vegetable Oyster

One ounce will plant 50 ft. of row; eight pounds per acre.

CULTURE—Salsify should be sown in early spring, thinning the plants to 4 or 5 inches apart in the row. If dug in the late fall, the roots are excellent for soups and boiling. They have a distinct oyster flavor and are considered a delicacy.

MAMMOTH SANDWICH ISLAND—The best variety we have grown because of its size and length. It is very palatable for cooking and in soups for late fall and winter use.

Postpaid Prices, 3rd Zone

Salsify

Pkt. 5c; 1 oz. 25c; 2 oz. 45c; 1 lb. $2.50
Tomatoes

One ounce will produce 2,000 plants.

CULTURE—Tomatoes may be started in hotbed or under glass to be ready for transplanting as soon as frost danger is over. Set out on land thoroughly prepared and free of weeds, spacing the plant 2 feet apart in the row. Often the seed may be planted in hills and a single plant allowed to grow, planting in the permanent bed where the crop is to be grown.

JOHN BAER—Our stock of John Baer has been used by many market gardeners and has given excellent results. It is an early variety with very solid flesh and a bright red color.

ACME—A well known variety, medium early in maturity. The fruits are round, smooth, and purplish pink in color.

BONNY BEST—For the home garden we recommend this variety because it is early and the fruits are medium in size, very firm, with a small seed cavity.

CHALK’S EARLY JEWEL—A variety which produces throughout the season if conditions are favorable. The fruits are large, bright, scarlet in color and stand shipment well.

YELLOW PEAR—For preserving and pickling this tomato is excellent. The fruits grow in clusters and are small in size, of bright yellow color and pear shape.

SPARK’S EARLIANA—We offer a special stock of this variety which has been selected for freedom from disease, type, and shipping quality. The fruits are large, smooth, of fine texture and quality.

MATCHLESS—A large, smooth tomato used in many sections for canning, maturing somewhat later than Earliana.

NEW STONE—This tomato is later in maturity than Earliana. The fruits are oval, of deep scarlet color.

GROUND CHERRY—A species of tomato producing the fruit inside of a husk. The fruits are small, round and yellowish in color and are used for preserving.

Turnips

One-half ounce will plant 100 feet of row; three lbs. per acre.

CULTURE—For an early crop, turnips may be sown in rows in early spring, thinning to several inches apart in the row as they develop. The main crop is sown under irrigation as soon as grain crop is harvested, sowing the seed with a drill or broadcast, following with a harrow. If the grain stubble has been irrigated thoroughly before discing, the crop will generally grow rapidly.

PURPLE TOP STRAP LEAF—One of the most popular varieties, producing a flat root, white with purple top, and a fine mild flavor. An excellent variety for commercial planting.

PURPLE TOP WHITE GLOBE—Similar in quality to the Strap Leaf, but of globe shape.

GOLDEN BALL OR ORANGE JELLY—One of the best yellow varieties for the home garden and of fine appearance for market use. A choice variety for early spring planting.

AMBER GLOBE—Medium in size, with a small top. An early variety with tender flesh of mild flavor. The root is globe shaped, and keeps well.

SNOWBALL or WHITE EGG—We suggest this turnip for the early spring garden. It is of small size, with pure white flesh, and mild flavor.

EARLY WHITE MILAN—One of the earliest flat varieties, with white skin.

Seed Potatoes

Many of our seed potatoes are grown on our own seed farm each season. It is possible to produce foundation seed stocks in this way for increase in other localities. All of the plants are under constant supervision by experts with our firm, who rogue for disease and the elimination of weak plants.

It is not possible for us to produce all of the seed potatoes we handle, so that we must depend upon State Inspection for the remainder of these stocks. All seed potatoes listed for inspection by the State, are inspected during the growing season to determine the freedom from disease. If the crop passes two field inspections, it is eligible for certification. The final grade, whether approved or certified, depends upon the way the potatoes are sorted for market.

There is no guarantee from the State or ourselves with reference to the grade of seed potatoes, but potatoes which carry State inspection tags, have met the requirements for certification and should be used for seed in place of ordinary crops which have not been rogued and inspected.

Our Seed Potato Grades

STATE CERTIFIED (Blue Tag)—All seed potatoes which have passed two field inspections and have been sorted at the bin from 2 to 12 oz. in size and are of the type necessary to meet the requirements. Packed in new bags 100 lbs. net weight when packed.

STATE APPROVED (Red Tag)—This seed must meet the same requirements as to field inspection, but are not sorted to as uniform type and size and greater tolerance is allowed for uneven shape and size. Packed in 100 lb. net weight bags.

Varieties—Bliss Triumph, Irish Cobbler, Early Red Ohio, Idaho Rural, Netted Gem.

See Insert Sheet for Prices.
Our Specials for 1929

We have added many new flowers to our list this season and believe that you will not find any better stocks offered. All packets are packed in our plant by experienced help and can be secured from your local dealer who will have an assortment for your choice. In case you do not find the variety you want, ask him to secure it for you.

**Asters**

**CREGO GIANTS**—These beautiful asters are early and produce a profusion of blooms even in localities where the growing season is short. The plants are robust, about two feet in height and produce large, double flowers of the Comet type.

- Crego Crimson
- Crego Purple
- Crego Shell pink
- Crego White
- Crego Lavender
- Crego Mixed Colors

Single Pkt. 10c; 5 separate colors 45c; ¼ oz. 50c postpaid

**EARLY BEAUTY**—The early beauty aster produces a more compact type of flower than the Crego and is very well adapted for cut flowers. The stems are long and the flowers have beautiful curled petals much like Chrysanthemums. These asters bloom at the same time as the Crego.

- Early Beauty Crimson
- Early Beauty Peach Blossom
- Early Beauty Purple
- Early Beauty Flesh Pink
- Early Beauty Lavender
- Early Beauty Mixed Colors

Single Pkt. 10c; 5 separate colors 45c; ¼ oz. 40c, postpaid

**HEART OF FRANCE**—A choice variety for adding intense color to the fall flower garden. The plants are stout and well branched with long stems. The flowers are compact and are of a rich dark red color. They keep well as a cut flower and are beautiful in mass plantings. Pkt. 10c; ¼ oz. 50c, postpaid.

**VICK’S BRANCHING**—We can supply you with this choice aster in assorted colors. The plants grow to a height of 3 feet and are profusely branched. The flowers are large, double and of fine form. Assorted colors only. Pkt. 10c; ¼ oz. 50c, postpaid.

**NEEDLE**—Some growers prefer the needle type to add variety to their aster collection. The petals of this variety are quilled, making them distinct as to shape. Assorted colors only. Pkt. 10c; ¼ oz. 50c, postpaid.

**SUNSHINE (Anemone Flowered)**—Flowers rose, lavender, and pink colors. Many are quilled with twisted petals. A fine aster because of the wide range of types and colors; very fine for cutting. Packet 10c; ¼ oz. 50c, postpaid.
**Sweet Peas**

**Special Spencer Varieties**

MARY PICKFORD—If you are a fancier of choice sweet peas, be sure to include this variety in your collection. The flowers are very large, averaging from three to four to the branch. The petals are a beautiful light pink and very wavy.

DEFIANCE—One of the outstanding orange scarlet varieties. It holds its color under intense sunlight and is a pleasing shade. It is vigorous growing late spencer.

HEAVENLY BLUE—A well-named variety of purest blue without a trace of violet. The flowers are large and wavy petaled and bloom profusely.

SNOWBALL—A large flowered pure white and one of the recent introductions. It was selected for keeping qualities as a cut flower, as the color does not yellow to any extent with age.

Special Sweet Peas: Single packet 15c; 1 oz. 50c, postpaid.

**Standard Late Spencer Varieties**

CULTURE—Sweet peas do best if seeded in the late fall or very early spring. The soil should be spaded quite deep and should be well fertilized with well rotted manure. The seed should be sown at a depth of two and a half to three inches, spacing the seeds about one to two inches apart in the row, later thinning to the desired stand. Sweet peas should be sown where they will secure the best sunlight.

All our Sweet Peas are from most reliable growers and are from highly selected stocks. We offer those varieties that are most popular.

Apple Blossom—Large flowers with wings primrose with a flush of rose tint.

Countess Spencer—One of the old standard Spencers with a clear pink color; flowers large and wavy petaled.

Dobbie’s Cream—A favorite with creamy colored petals.

Fiery Cross—A brilliant cerise orange of strong color.

Hercules—A giant clear pink of uniform color.

Illuminator—An orange salmon of striking color.

King White—A fine clear white.

King Edward—One of the old standard pure red Spencers of large size.

Margaret Atlee—This deep clear pink is an old standard.

Lavender George Herbert—We suggest this pure lavender as one of the best.

Primrose—Large flower of purest primrose color.

Royal Purple—Rich purple in color with flowers of large size.

Wedgewood—Of a bright blue color.

Sweet Pea Mixture—We offer our special strain of mixed sweet peas for the critical trade. All choice late varieties in a wide range of colors. Pkt. 10c; 1 oz. 20c, postpaid.

Grandiflora—A mixture of colors in this type, which are somewhat smaller in size than the Spencers, but often grown to add variety to the planting. Packet 10; 1 oz. 15c, postpaid.
CULTURE—Zinnias should be started under a cold frame or they may be sown out-of-doors after all danger of frost is passed. After the plants are large enough to transplant, they should be placed in the permanent bed, spacing them from 18 inches to 2 feet apart. If the flowers are cut often they will continue to bloom until frost. They will stand intense sunlight but need plenty of water and fertilizer to produce a vigorous growth.

Our Dahlia Flowered Zinnia seed is grown especially for us by a nationally recognized grower and are the best stocks produced and are suited to the florist trade. The flowers of this type are very large, the petals are cup shaped instead of flattened in the Giants, giving them a dahlia-like appearance.

CRIMSON MONARCH—A brilliant red flower of immense size, holding its color well.

DREAM—A deep lavender shade turning to purple.

EXQUISITE—Light rose in color with the center of deep rose.

GOLDEN STATE—A rich orange yellow of brilliant color.

LEMON BEAUTY—One of the new pastel shades described as a golden yellow on brown.

POLAR BEAR—A pure white of large size and perfect dahlia flower.

MIXED COLORS—An assortment of colors containing all of the standard varieties as well as many of the newer novelties.

Packet 15c; 5 packets 60c; ¼ oz. 50c, postpaid.

Lilliput Zinnias

Lilliput Zinnias are one of the new flower novelties which are very popular because of their varied use. They are low growing and can be used in the border as well as in mass planting. They produce excellent table bouquets as well as cut flowers. The flowers are from 1 to 1½ inches in diameter and are of the perfect zinnia shape and variety of colors.

Packet Assorted Colors, 15c; ¼ oz. 50c, postpaid.

Petunias

CULTURE—Petunia seed is very difficult to germinate because of its small size and delicate sprouts. The seed should be sown on the surface of the hot bed or cold frame in soil which has been mixed thoroughly with granulated peat. The peat helps to retain the moisture and prevents the surface baking. After the seed is sown a light dressing of granulated peat should be scattered over the seed. If the bed is kept moist and partly shaded during the day, the seeds will germinate in a short time. The small plants should be transplanted before placing in the permanent location.

GIANTS OF CALIFORNIA — These petunias are very large, ruffled and fringed and are of a beautiful variety of colors. Our seed will produce as fine flowers as can be grown.

Packet 25c; 1-32 oz. $3.00, postpaid.

ROSY MORN—A rosy pink single petunia with white throat. One of the best varieties for the border and mass planting.

Packet 15c; ½ oz. $1.00, postpaid.

ELKS PRIDE—A deep royal purple variety of rich color, used for borders, window boxes and bedding. One of the richest colored varieties ever developed.

Packet 25c; 1-32 oz. $3.00, postpaid.

BALCONY RED—A deep red petunia of the balcony type, suited to window box and borders. The flowers are single and of a rich color.

Packet 15c; ½ oz. 75c, postpaid.
How to Prepare Flats for Germination of Flower Seeds

Flower seeds should be started in flats so that they can be transplanted to the garden in the proper season. They will produce stronger plants and will bloom earlier than sowing out of doors as early as weather conditions permit.

Wood flats 12x18 inches and 3 to 4 inches in depth are the best size to handle. Use a mixture of sifted top soil to which is added about 25% of sand 25% of granulated peat moss. Mix thoroughly and work with enough water to make the bed firm. A light covering of one-half inch of granulated peat moss should be added to the surface to serve as a bed for the seeds and to prevent baking and cracking of the surface.

The boxes should be placed under glass or Sun-cloth, allowing plenty of air under the cover. Keep the surface moistened enough to germinate the seed. If the seeds are planted in rows, it is easier to weed and to determine the percentage of germination.

All small seeds, such as Petunias, Kohelia, Sweet William, Salpiglossis, Lobelia, etc., should be sown on the surface, pressed down lightly and a thin layer of granulated peat moss sprinkled over the top. Do not cover any more than necessary to hold the moisture toward the surface.

Larger seeds may be planted in shallow rows made in the soil, then covered with a thin layer of peat moss. If there is any indication of damping-off fungus appearing, Semesan should be added to the water used in sprinkling the beds.

After the seeds have germinated and the plants appear, thin them to the desired spacing and keep the flats weeded. Some seeds require from 15 to 20 days to germinate, so plenty of time should be allowed to take care of slow growing seeds.

Standard Flower Favorites

AGERATUM (Blue Perfection)—A choice low growing annual for borders. The flowers are blue in color and of feathery ball-like appearance. It should be used for bedding where a strong blue color is needed. The flowers are fine for cutting and bouquets. Packet 10c; 1/4 oz. 25c, postpaid.

ALYSSUM (Sweet)—A well known variety 10 inches in height with fragrant white flowers. An excellent border plant. Packet 10c; 1/4 oz. 25c, postpaid. (Carpet of Snow)—Low growing, pure white, trailing habit. Packet 10c; 1/4 oz. 25c, postpaid. (Little Gem)—A special dwarf variety of Alyssum with masses of pure white flowers. Packet 10c; 1/4 oz. 25c, postpaid. (Saxatile Compactum) — This perennial strain of Alyssum is valuable for rock gardens. It produces yellow flowers and is desired by many for its color. Packet 10c; 1/4 oz. 30c, postpaid.

AMARANTHUS TRICOLOR (Joseph's Coat)—A very showy annual growing to a height of 3 feet. The leaves are variegated in color, red, yellow and green. It is used where a variety of color is needed. Packet 10c; 1/4 oz. 25c. postpaid.

ANEMONE (Windflower)—A half hardy perennial 18 inches in height with beautiful delicate flowers. Should be included in the rockery. Packet 10c; 1/4 oz. 50c, postpaid.

ARCTOTIS GRANDIS (African Daisy)—These annual daisies grow from 6 to 10 inches tall, producing pure white flowers with lilac under color. Fine for cutting. Packet 10c; 1/4 oz. 25c, postpaid.

ARABIS (Rock Cress)—One of the best white flowering perennials for rock garden, blooming very early in the season. It is low growing and is fine for borders or massing. Packet 10c; 1/4 oz. 25c, postpaid.

ASTERS—See special flower list on page 20.

BACHELOR'S BUTTON—Old favorite annuals growing to a height of 3 feet. The flowers are of various shades of blue, purple, pinks, and white and the foliage is small. Easily grown from seed planted out of doors. Packet 10c; 1/4 oz. 25c, postpaid.

BALSAM—An annual 1 to 2 feet in height suited to borders or group planting. The rose-like flowers grow in the axil of the leaves and are beautiful in shade and color. Packet 10c; 1/4 oz. 25c, postpaid.

BLUE LACE FLOWER—This annual grows 2 feet in height and has lace-like mass of blue colored flowers. The blooms are produced throughout the season and can be used for cutting and general garden display. Packet 10c; 1/4 oz. 50c, postpaid.

CALENDULA (Lemon Queen)—A rich lemon yellow variety with large compact blooms. The plants are used for massing and borders. If cut often will bear throughout the season. Packet 10c; 1/4 oz. 25c, postpaid. (Orange King)—Similar in quality to the Lemon Queen but the flowers are of a deep orange color. Packet 10c; 1/4 oz. 25c, postpaid. (Mixed Colors)—An assortment of colors varying from nearly white dark orange colors. Packet 10c; 1/4 oz. 25c, postpaid.

12 Packets of Flowers Listed at 10c, for $1.00, postpaid.
CALIFORNIA POPPY (Eschscholtzia)—These annuals grow wild throughout California and many new colors have been produced by selection. The plants are low-growing, with beautiful poppy-like flowers in a wide range of colors. They can be used in the rock garden as well as the general flower planting. Packet 10c; 1/2 oz. 30c, postpaid.

CALLIOPSIS—A hardy annual with long graceful flower stalks. The flowers vary in color from yellows to dark maroon. Fine for cutting and mass planting. Packet 10c; 1/2 oz. 25c, postpaid.

CANDYTUFT—These plants should be spaced about 1 foot apart in the row and will produce a fine growth of spike-like flowers of various colors. It is low enough in growth to be used for borders, and is of value as a cut flower. Packet 10c; 1/2 oz. 25c, postpaid.

CANDY BIRD VINE—An annual climbing vine of graceful form. Seed should be sown indoors and the plants set out after frost. The flowers are of peculiar shape and of yellowish color. Plants grow to a height of 10 feet. Packet 10c; 1/2 oz. 25c, postpaid.

CARDINAL CLIMBER—A vine-like annual with fern shaped foliage growing to a height of 20 feet. It produces fiery cardinal red flowers. A desirable plant for trellis. Packet 10c; 1/4 oz. 50c, postpaid.

CANTERBURY BELLS—Hardy biennials 2 to 3 feet in height, producing large bell-like flowers in assorted colors. Desirable for rockeries and borders. Packet 10c; 1/4 oz. 25c, postpaid.

CLARKIA—Hardy shrub-like annuals with colored stems and rosy flowers. A very attractive plant for massing and for planting among perennial shrubbery. Packet 10c; 1/4 oz. 30c, postpaid.

COCKSCOMB—A late blooming annual with large comb-like masses of brilliant red flowers, produced at the top of the plant. A fine flower to add color to the late garden. Packet 10c; 1/4 oz. 30c, postpaid.

COLUMBINE—Perennial plants with delicate wavy foliage and graceful spurred flowers of attractive colors. Widely used in rockeries and among shrubbery, growing well in partial shade. Packet 10c; 1/4 oz. 50c, postpaid.

COREOPSIS—A beautiful perennial daisy with yellow petals of glossy color and widely used in rock gardens. The flowers are suited to cutting. Packet 10c; 1/4 oz. 25c, postpaid.

COSMOS—Graceful tall growing annuals with fern-like foliage tipped with large flowers of various colors, blooming from mid-summer until frost. Early Single Red Cosmos Early Single White Cosmos Early Single Pink Cosmos Early Single Mixed Cosmos Packet 10c; 1/4 oz. 30c, postpaid.

CYPRESS VINE—A rapid growing vine having star shaped flowers. Grows best in warm sunny locations. Packet 10c; 1/4 oz. 25c, postpaid.

CHINESE WOOLFLOWER—The branches of this annual terminate in a large ball of velvety dark red color. It grows to 2 feet in height and blooms throughout the season. Packet 10c; 1/4 oz. 35c, postpaid.

DUSTY MILLER (Centaurea Candidissima)—An annual with silvery gray foliage used in window boxes to add variety to the planting. Pkt. 10c; 1/4 oz. 50c, postpaid.

DELPHINIUM—Our strain of Delphinium contains a wide range of colors and will produce the beautiful flowers so much in demand by the critical trade. Packet 10c; 1/4 oz. 50c, postpaid.

ENGLISH DAISY (Bellis)—These daisies are perennials, growing to a height of only a few inches. The flowers develop in three colors, red, pink, and white. Seeds are often planted broadcast throughout the lawn and the plants are very attractive for borders in the permanent flower garden. Packet 10c; 1-16 oz. 50c, postpaid.

FORGET-ME-NOT—Blue flowering perennials best suited to moist shady locations. Packet 10c; 1/4 oz. 50c, postpaid.

FOUR O’CLOCK (Marvel of Peru)—A hardy annual producing funnel shaped flowers in assorted colors. The flowers generally bloom in late afternoon and during the night. Height 2 feet. Packet 10c; 1/4 oz. 20c, postpaid.

FOXGLOVE (Digitalis)—Biennial or perennials producing flowers after the first season, used extensively in rock gardens. These plants have long terminal spikes of graceful flowers, white, lavender or rose color. Height 3 feet. Packet 10c; 1/4 oz. 30c, postpaid.
WAshburn-Wilson seed company, Moscow, Idaho

GAILLARDIA (Blanket Flower)—Single Mixed. Large showy annuals with brown, orange and yellow flowers, blooming in profusion until late fall. Packet 10c; 1/4 oz. 25c, postpaid.

GEUM—Hardy perennials 1 foot tall, free blooming. Fine for cutting and bouquets. Used in border plantings.

Lady Stratheden—Flowers double of golden yellow color.
Mrs. Bradshaw—Flowers double, of orange scarlet color.
Packet 10c; 1/4 oz. 75c, postpaid.

GOMPHRENA (Globe Amaranth)—A desirable bedding plant growing from 1 to 2 feet in height. The flowers are clover-like in shape and are of various colors. A fine annual for cutting. Packet 10c; 1/4 oz. 25c, postpaid.

GOURDS—These viney plants are interesting to grow for the children, as the dry fruits can be utilized in many ways. Our stocks produce the smaller type of gourds. Packet 10c; 1 oz. 40c, postpaid.

GYPSOPHILA (Baby’s Breath)—A delicate branching plant with small star-shaped flowers. Used in decorating cut flowers.

Annual White—Packet 10c; 1/4 oz. 20c, postpaid.
Perennial White—Packet 10c; 1/4 oz. 25c, postpaid.

HELIOTROPE—A fragrant bedding plant, which should be sown in the cold frame and transplanted early. A free blooming annual, very desirable for its bluish lavender color and fragrance. Packet 10c; 1/4 oz. 40c, postpaid.

HIBISCUS (Marshmallow)—Perennials with large flowers, yellow color, growing from 4 to 6 feet tall. Blooms are produced throughout the season, the plants dying back during the winter season. A favorite for background work. Packet 10c; 1/4 oz. 30c, postpaid.

HOLLYHOCK—Hardy old-fashioned perennials for background planting. Flowers of various colors, many doubles. Packet 10c; 1/4 oz. 35c, postpaid.

ICE PLANT—This trailing annual is used in porch boxes, for rock gardens. The stems and leaves are very succulent and appear to be covered with ice crystals, the flowers are light red in color and appear as tufts of slender threads. Packet 10c; 1/4 oz. 30c, postpaid.

KOCHELIA (Mexican Fire Bush)—This summer annual is used in borders and if spaced 2 feet apart, give the appearance of a green hedge, or group of evergreens. The plants turn red in the fall. Packet 10c; 1/4 oz. 25c, postpaid.

LANTANA—A free blooming annual with various colors of flowers which change in color as the season advances. A fragrant plant for bouquets. Packet 10c; 1/4 oz. 25c, postpaid.

LARKSPUR—Annual Larkspur is beautiful for its variegated colors and double flowers. Fine for bedding and mass plantings. Packet 10c; 1/4 oz. 30c, postpaid.

LINUM (Red Flax)—An annual variety of flax with bright red flowers. The foliage is delicate and adds to the variety in any flower garden. Packet 10c; 1/2 oz. 25c, postpaid.

LOBELIA—Dwarf Lobelia is used extensively in porch boxes, and borders, because of its beautiful blue color and delicate foliage. Packet 10c; 1/4 oz. 50c, postpaid.

LUPINS—Our strain of Lupins is an annual easily grown from seed. The flowers are borne on long spikes and are pea-shaped. Packet 10c; 1/4 oz. 25c, postpaid.

LUPINUS (Tall African)—The Marigold is a well known annual blooming throughout the season, with orange, and yellow flowers. Used in mass planting and for cut flowers.

Orange Ball—Orange in color, double.
Lemon Ball—Lemon yellow in color, double.
Mixed Colors.
Packet 10c; 1/2 oz. 40c, postpaid.

MIGNONETTE—A sweet scented annual for borders, growing 12 inches tall. Excellent for bouquets. Assorted colors. Packet 10c; 1/2 oz. 25c, postpaid.

MORNING GLORY—Old fashioned annual climbers for covering trellis or porch. The flowers are bell shaped and of variegated colors. Packet 10c; 1/2 oz. 25c, postpaid.

NASTURTIUM—These hot season annuals should be included in every garden because of their productivity and adaptability. Will grow on poor soils and intense sunlight. The taller varieties are used in porch boxes, allowing them to trail over the edges. Tall Mixed. Dwarf Mixed. Packet 10c; 1 oz. 20c, 1/4 lb. 75c, postpaid.

ORIENTAL POPPY—Rich scarlet red flowers of value in the perennial garden. The plants are hardy and bloom early in the season before many of the annuals are ready. We believe that this is the best poppy for garden planting. Packet 10c; 1/4 oz. 40c, postpaid.
Standard Favorite Flowers—continued

**PANSY**—For early spring bloom, the pansy is one of the best. It will live from season to season if given some protection during the winter. The flowers are of beautiful colors and bloom profusely if kept picked.

Oregon Giants—Packet 10c; ¼ oz. $1.00, postpaid.

Giant Trimardeau—Packet 10c; ¼ oz. 75c, postpaid.

**PETUNIA**—The common petunia grows well in extreme sunlight and is used in massing, giving a pleasing color effect. Easily grown from seed planted in the cold frame and transplanted to the garden after frost. Packet 10c; ¼ oz. 40c, postpaid.

For Special Petunias, See Page 22.

**PHLOX**—The annual Drummondii is low growing and being a free bloomer is used for borders and bedding. Easily grown and hardy. Packet 10c; ¼ oz. 40c, postpaid.

PHLOX (Perennial)—We offer only the assorted colors of perennial Phlox. They should be started in the hot-bed and transplanted as early as the season permits. A background of mixed Phlox is very pleasing in its effect as they are persistent in flower. Height 2 to 3 feet. Packet 10c; ¼ oz. 75c, postpaid.

**PINKS**—Old fashioned flowers producing a variety of colors. Useful for beds and borders as they are low growing. Packet 10c; ¼ oz. 35c, postpaid.

**POPPY** (Double Carnation Flowered)—These ball-like flowers are very attractive in the annual garden and grow readily from seed planted out of doors. Plants 3 feet tall. Packet 10c; ½ oz. 25c, postpaid.

**POPPY** (Shirley)—Single flowered poppies with soft hairy foliage. Because of their delicate shades of color, they are desired for the annual garden. Packet 10c; ½ oz. 25c, postpaid.

**PORTULACA** (Moss Rose)—A low-growing trailing annual used in rock gardens, borders, etc. The flowers are rose-like and of beautiful colors. Packet 10c; ¼ oz. 35c, postpaid.

**PYRETHRUM** (Golden Feather)—A dwarf variety used for borders. It is a perennial plant with golden yellow foliage. Packet 10c; ¼ oz. 40c, postpaid.

**RICINUS** (Castor Bean)—Tall palm-like annual with bright green foliage. Mature seed is only produced where the season is favorable. Packet 10c; 1 oz. 25c, postpaid.

**SALPIGLOSSIS**—You should grow this beautiful annual. The plants grow about 3 feet tall, the flowers are bell-shaped, with delicate markings and velvety appearance. Grown in a wide range of colors and used for massing and cut flowers. Pkt. 10c; ½ oz. 35c, postpaid.

**SCABIOSA** (Mourning Bride)—Flower stalks 2 feet tall, with inconspicuous foliage and large flat flowers of beautiful colors. Used in mass planting and for cut flowers as they keep well. Packet 10c; ½ oz. 35c, postpaid.

**SCARLET RUNNER BEAN**—This bean derives its name from the brilliant flower produced along the runners. It is a pole type of bean and should be trained on a trellis or fence. Should be planted after danger of frost. Packet 10c; ½ lb. 20c, postpaid.

**SHASTA DAISY**—One of the purest white daisies grown. A hardy perennial, blooming throughout the season. Packet 10c; ¼ oz. 50c, postpaid.

**SWEET SULTAN**—A beautiful annual for baskets and cutting, with thistle-like heads. The petals are feathery and soft in texture, with lavender, pink and light shades of color. Packet 10c; ¼ oz. 25c, postpaid.

**SNAPDRAGON** (Antirrhinum)—One of the most popular semi-hardy perennials for massing and cut flowers. The plants bloom profusely if kept cut off and well fertilized.

Copper King—Velvety copper scarlet.

Ruby—Rich velvety ruby red.

Canary Bird—Canary yellow, golden yellow center.

Othello—Dark maroon, satin sheen.

The Rose—Rose pink.

Tall Mixed.

Dwarf Mixed.

Packet 10c; ¼ oz. 50c, postpaid.
STATICE (Sea Lavender)—A hardy perennial 2 feet in height with fine branching stems and bluish everlasting flowers. Used for cutting and bouquets. Packet 10c; 1/2 oz. 25c, postpaid.

STOCKS—One of the best early flowering annuals for bedding and pot culture. The flower stalks are compact with double rose-like blossoms of beautiful colors. Packet 10c; 1/2 oz. 50c, postpaid.

STRAWFLOWER (Helichrysum)—For winter bouquets, the strawflower is unsurpassed. If the flowers are cut when in full bloom and allowed to dry, they will hold their color and keep during the winter season. The colors are red, orange, pink, etc., and produce a pleasing blend. An annual easy to grow. Packet 10c; 1 oz. 25c, postpaid.

SUNFLOWER—Mammoth Russian is the type generally grown for poultry feed and silage. The stalks often reach a height of 10 feet, with large disk heads. Packet 10c; 1/2 lb. 15c, postpaid.

DWARF DOUBLE—A smaller variety with large double orange yellow flowers, very uniform in type and beautiful in appearance. Packet 10c; 1 oz. 25c, postpaid.

SWEET WILLIAM—Our stock of this hardy perennial has a wide range of color combinations. The plants bloom early in the season and make excellent borders. Height 2 feet. Packet 10c; 1 oz. 25c, postpaid.

TRITOMA (Red Hot Poker)—Hardy perennials producing a tall flower stalk of brilliant cerise color. Blooms during the early part of the season. Packet 10c; 1/4 oz. 75c, postpaid.

VERBENA—The Verbena is an ever popular annual for window boxes, borders, and massing. It is low growing and produces graceful flowers in pink, red, blue and white colors. Packet 10c; 1/4 oz. 50c, postpaid.

WALL FLOWER—Half-hardy perennials growing 1 foot in height. Flowers are a rich red, and yellow in color. Packet 10c; 1/4 oz. 25c, postpaid.

WILD CUCUMBER—One of the most rapid growing vines for covering trellis or for shading windows. The seeds are very hard and should be scarified before planting. Fall sown seed will generally germinate by early spring. Packet 10c; 1 oz. 25c, postpaid.

WILD FLOWER GARDEN—A well balanced mixture of flower seeds suitable for planting in corners and vacant areas around the garden. Packet 10c; 1 oz. 25c, postpaid.

Hardy Perennial Plants

We have had many inquiries for biennial and perennial plants for use in rockeries, permanent gardens, and for ornamental plantings. We can now offer you the best grade of these plants obtainable in the Northwest. All of our plants are grown locally under non-irrigated conditions and are packed properly to reach you in good condition. Owing to the difficulty in determining transportation cost, all prices are made F.O.B. Moscow and shipments are made by express collect.

ALTHEA ROSEA (Hollyhock)—Blooming from July until frost.

Single Mixed.
Single Pure White.
Single Deep Maroon.
Double Red.
Double Rose.
Double White.
Double Yellow.

PENTSTEMON (Beard’s Tongue)—Flowers spike-like of bright scarlet color, blooming throughout the season. 25c each; $2.50 per dozen, express extra.

PHLOX—One of the most desirable perennials for mid-summer and fall bloom. Height 3 feet. Assorted colors. 25c each; $2.50 per dozen, express extra.

PYRETHRUM (Painted Daisy)—Hardy daisies with long stems, blooming profusely. Flowers keep well when cut. Rose and red colors. 25c each; $2.50 per dozen, express extra.

RUDBECKIA (Golden Glow)—Tall growing hardy perennials for fall bloom. The flowers are large and of golden yellow color. 25c each; $2.50 per dozen, express extra.

SCABIOSA—Flowers of delicate lavender color borne on graceful stems. Fine for cutting. Persistent in bloom. 25c each; $2.50 per dozen, express extra.

SWEET WILLIAM—Early flowering pinks of a wide variety of colors. 25c each; $2.50 per dozen, express extra.

TRITOMA (Red Hot Poker)—A handsome border plant with large flowers of orange scarlet color. Need some protection during winter. 25c each; $2.50 per dozen, express extra.

Ornamentals

Our landscape department is waiting to help plan your plantings. Send us a sketch of your lawn, location of buildings, and note the present plantings, we will then prepare a sketch for you, showing our suggestions for permanent planting.

It is not necessary to invest a large amount in landscape plans and ornamentals the first season. Choose your plan and then add a few shrubs each year. We have started many toward more attractive home surroundings and they are completing the plans each year.

We can assure you complete satisfaction in your choice of our ornamentals as all plants have been grown without irrigation and are hardy, well rooted, and disease free.

All prices F. O. B. Moscow, express extra. Order early, shipments made in season.

ALMOND—An early blooming hardy shrub bearing a profusion of rose-like flowers in May. Pink Flowering—Each, $1.00. White Flowering—Each, $1.00.

Hardy Climbing Vines

VIRGINIA CREEPER—A rapid growing vine for covering porch or windows. It is hardy. Leaves are of rich crimson color in fall. Each, 50c.

ENGELMAN CREEPER—The best vine for rock or brick walls, as the plant clings tightly to the crevices. Each, 75c.

TRUMPET VINE—A showy, hardy vine with trumpet flowers of brilliant orange scarlet color. Each, 75c.

BOSTON IVY—A popular vine for rock walls. Each, 75c.

CLIMATIS—One of the best vines for its fall flowers are of beautiful color.

Henryi—Large creamy white flowers. Each, 75c.
Jackmanni—Large violet flowers. Each, 75c.
Paniculata—Flowers smaller, pure white. Each, 75c.

WISTARIA—A rapid growing vine with beautiful clusters of pendant flowers.

Blue—Flowers pale blue. Each, 75c.
White—Flowers pure white. Each, 75c.

DUTCHMAN’S PIPE (Aristolochia Sipho)—One of the most satisfactory vines for shading the porch or windows. The vine grows rapidly and is very hardy. The flowers are brownish in color and just the shape of a curved pipe. The flowers appear in early spring as the leaves are beginning to develop. The leaves are large oval in shape, and produce a beautiful effect. Large rooted plants. Each, 50c.

Gladioli

We have made arrangements with Mr. Mc. P. Bailey of our city, who is recognized as one of the outstanding Gladiolus growers, to handle the distribution of his surplus bulbs. Mr. Bailey has grown Gladiolus for a number of years as a hobby and has increased his best varieties. He has received special awards in the best shows throughout the United States and offers only his surplus bulbs of large size.

All bulbs are guaranteed true to name and as some varieties are limited in quantity of bulbs, we suggest that you place your order promptly. Shipment will be made in time for planting.

All Prices Postpaid

SPECIAL GLADS

GOLDEN DREAM—We believe that this new yellow surpasses all self yellows originated to date. The spike has length and strength and as many as 6 flowers are commonly open at a time. It grows quite tall and is certainly in a class by itself for color and beauty. Each, $1.50; dozen, $15.00.

PRIDE OF WENAKAH (Criswell)—A rich lavender rose with deeper color in the throat. Spikes very strong and many blooms open at once. Each, 50c; dozen, $3.00.

ROSE MIST (Fischer)—The wonder glad. Color is crushed strawberry. Size medium, with wonderful placement. (91 days). Each, 50c; dozen, $5.00.

ETHELYN (Fischer)—A fine orange yellow primulinus. Grows quite tall with large spikes. (95 days). Each, 50c; dozen, $5.00.

W. H. PHIPPS—A La France pink overlaid with light rose salmon, lower petals faintly striped and speckled with ruby. Flowers of large size. (116 days). Each, 50c; dozen, $3.00.

LOS ANGELES—The “cut and come again” gladioli. The blooms are orange pink with deeper blotch in the throat, delicately ruffled. (90 days). Each, 25c; dozen, $2.50.

BREAK O’DAY (Gladiolus Bill)—La France pink, flushed over a cream ground, deepening at the edges, with soft yellow throat. Very early. (77 days). Each, 50c; dozen, $5.00.

OTHER CHOICE GLADS

ALBANIA (Kemp)—Pure glistening white, with broad well rounded petals. (89 days). Each, 10c; dozen, $1.00.

ALICE TIPLADY (Kunderd)—A bittersweet pink, suffused with scarlet on the outer edges, giving the appearance of orange saffron color. (92 days). Each, 10c; dozen, $1.00.

ALMA GLUCK (Gage)—A primulinus hybrid of brilliant peach red with rich yellow throat markings. Very distinctive and fine for cutting. Each, 15c; dozen, $1.50.

ANNA EBERIUS (Diener)—Beautiful dark velvety purple, throat dark amaranth-purple, slightly ruffled. (97 days). Each, 10c; dozen, $1.00.

CHAMELEON (Gladiolus Bill)—This choice glad is very difficult to describe as to color. We would suggest a soft cherry red. Each, 25c; dozen, $2.50.

CHATEAU THIERRY (Vos)—An orange ce¬risse with yellow bordered blotch red. (99 days). Each, 10c; dozen, $1.00.
CRIMSON GLOW (Betscher)—Scarlet red, slightly stippled with primrose yellow in the throat, overlaid with a velvety scarlet blotch. One of the best of its color. (96 days). Each, 10c; dozen, $1.00.

EARLY ONE (Billy)—Subdued begonia rose, amber yellow throat stippled with aster purple. (77 days). Each, 10c; dozen, $1.00.

EVELYN KIRTLAND (Austin)—One of the best all purpose varieties. A La France pink, overlaid rose doree; throat blotched soft scarlet red. (101 days). Each, 10c; dozen, $1.00.

GIANT NYMPH (Coleman)—A fine pink with wide open flowers, growing quite tall and vigorous. Each, 25c; dozen, $2.50.

GOLD (Hoeg)—Pure, golden yellow, throat a shade deeper. A fine clear yellow, having large floret, many opening together. (92 days). Each, 10c; dozen, $1.00.

HARMONIA (Fischer)—A fine primulinus with showy salmon self colored flowers. Each, 25c; dozen, $2.50.

LA VERNE (Houdyshell)—A primulinus grandiflora type. Flowers a fine yellow with a pink flush quite pronounced on the edges and tips of the petals, with a deeper blotch in the throat. (95 days). Each, 30c; dozen, $3.00.

Le MARECHAL FOCH (Van Dursen)—Glistening white, suffused cameo-pink; reverse suffused light rosalane purple. One of the best Holland introductions. (92 days). Each, 10c; dozen, $1.00.

LUSTRE (Kunderd)—Tall large flowers orange vermilion. One of the best. (98 days). Each, 10c; dozen, $1.00.

MRS. F. C. PETERS (Fischer)—A popular gladioli of Orchid color, amaranth pink with a purple blotch in the throat. (127 days). Each, 15c; dozen, $1.50.

MRS. FRANK PENDELTON (Kunderd)—Deep rose pink, shading to a pale pink throat. Noted for its large bright rose red blotch on the lower petals. (98 days). Each, 10c; dozen, $1.00.

MRS. LEON DOUGLAS (Diener)—Ground color begonia rose, striped with flame and brilliant scarlet. Lip pale lemon slightly speckled with ruby. The spikes of this variety are the largest grown and are very open. (99 days). Each, 20c; dozen, $2.00.

MONA LISA (Kunderd)—A ruffled glad with palest pink flowers, sometimes called bluish-white. One of the most delicately colored flowers grown. (108 days). Each, 15c; dozen, $1.50.

NANCY HANKS (Salbach)—Rich apricot to orange pink with grenadine tinge. These primulinus-hybrid colors are very unusual in the large flowering Glads. A rapid grower, fine for cutting. (96 days). Each, 35c; dozen, $3.50.

ORANGE PRINCEPS (Vos)—One of those rare colors among the Primulinus which makes them so desirable. Capucine orange slightly tinted deeper orange. A perpetual bloomer, and a sensation wherever shown. (92 days). Each, 10c; dozen, $1.00.

PURPLE GLORY (Kunderd)—The giant of the Kunderdii Glory race. Deepest velvety maroon red, with almost black blottches burned into the petals. Beautifully ruffled. (99 days). Each, 20c; dozen, $2.00.

RICHARD DIENER (Diener)—Pale geranium pink, occasional flaking of rose doree; throat blotched barium yellow, lightly stippled carmine; mid-ribs sometimes barium yellow. A choice ruffled variety. (95 days). Each, 25c; dozen $2.50.

ROSE ASH (Diener)—Corinthian red shading into ashes of rose on the outer edges. Lower petals light yellow speckled with ruby. (100 days). Each, 10c; dozen, $1.00.

SCARLET PRINCEPS (Kunderd)—Six or more massive Princeps-like blooms open at a time. Throat a little deeper in color. An extraordinary distinct and massive spike. (98 days). Each, 15c; dozen, $1.00.

SPLENDORRA (Kunderd)—A splendid very dark wine-black. Wonderful for planting with Mona Lisa for color effect. (98 days). Each, 10c; dozen, $1.00.

SUPERBA (Coleman)—This glad calls forth more exclamations of admiration than any in our collection. The color is rich, glowing scarlet bordering on carmine. The blossoms are large, widely open and very showy. (77 days). Each, 35c; dozen, $3.50.

OUR PALOUSE MIXTURE—A selected mixture of bulbs of the above varieties, together with others not included in the list. All bulbs are of good size, disease-free and will bloom the first season. If you are not interested in named varieties, this mixture will produce a wide variety of color. 50 bulbs $1.75; 100 bulbs, $3.00.

**Peonies**

Fall planting is generally best with peonies, yet spring planting is successful if done very early. Orders should be placed in February at the latest and shipment will be made as soon as the season permits. All of our plants are hardy local grown stocks.

ALEXANDER DUMAS—A brilliant pink, early in bloom and very vigorous. Each, 75c; express extra.

BARONESS SCHROEDER—Considered one of the finest peonies grown. The buds are a delicate pink when they first open, changing to a milky white as they mature. Rather late in bloom. Each, $1.00, express extra.

COURONNE D'OR—A mid-season white flowered variety with yellow stamens. Each, $1.00, express extra.

DELACHEI—Mid-late free blooming red. Each, 75c, express extra.

EDULIS SUPERBA—In this locality blooms are produced by Decoration Day. Flowers are a deep pink color. Each, $1.00, express extra.

FELIX CROUSSE—Mid-season deep rose red. Each, $1.00, express extra.
Peonies—continued

**FESTIVA MAXIMA**—The best white peony grown. Flowers are very fragrant and a profuse bloomer. Each, 75c, express extra.

**KARL ROSENFIELD**—A brilliant striking red, blooming in mid-season. Each, $1.50, express extra.

**LA PERLE**—Mid-season, flowers a soft pink. Each, 75c, express extra.

**MADAM DE VERNEVILLE**—Very large bomb type with center petals rose white touched with carmine. Mid-season. Each, 75c, express extra.

**MADAM DE VANTRY**—Large white collar, yellowish white, center splashed with carmine. Mid-season. Each, 75c, express extra.

**MARIE LEMOINE**—Sulphur white, very fragrant, late peony. Each, $1.00, express extra.

**OFFICINALIS RUBRA**—The best early peony for its profuse bloom and deep red color. Each, 75c, express extra.

**QUEEN VICTORIA**—A pure white, very fragrant and hardy. Mid-season. Each, 75c, express extra.

**VENUS**—Taller growing variety with pale hydrangea pink flowers. Mid-season. Each, $1.00, express extra.

PLACE YOUR PEONY ORDERS EARLY, SHIPMENTS MADE IN SEASON.

**Hardy Roses**

All of our roses are hardy field grown stock, which will bloom the first season if given favorable growing conditions.

**FRAU KARL DRUSCHKI**—A fine hardy rose of the American Beauty type with large double white flowers. Each 75c.

**OPHELIA**—A vigorous growing hardy tea rose. Blooms early producing salmon orange flowers. Each, 75c.

**MRS. JOHN LANG**—Free blooming hardy perennial with soft pink flowers. Each, 75c.

**ULRICH BRUNNER**—A hardy perennial with large flowers of deep red or scarlet color. Each, 75c.

**MADAM EDOUARD HERRIOT**—One of the newest shades of color, a coral red. Each, 75c.

**LOS ANGELES**—A hardy tea rose, flaming pink in color and free blooming. Each, 75c.

**LADY HILLINGTON**—Beautiful long pointed tea buds of deep yellow color. Excellent for cutting. Each, 75c.

**SOUV. de CLAUDIUS PERNET**—A vigorous growing attractive yellow. Each, 75c.

**USE EVERGREEN ON YOUR ROSES**

Evergreen will control red spiders, thrips, aphids, leaf hoppers, rose slugs, and other insects which damage roses. It is a non-poisonous insecticide and is easy to apply, does not burn the foliage, and gets quick results. See page 42 for prices.

**MULCH YOUR ROSES WITH PEAT MOSS**

Peat moss used as a top dressing around roses will reduce the amount of water needed during the season. It prevents the soil baking and holds the moisture. It can be mixed into the top soil or spread over the surface and thoroughly soaked.
Climbing Roses

AMERICAN PILLAR—The best single flowered rose grown for trellis. The flowers are a bright crimson color. Each, 75c.

PAUL’S SCARLET—A vivid scarlet rose of intense color. One of the best climbers. Each, 75c.

Iris

We can supply you German Iris in assorted colors. All of our stock is non-irrigated with large rhyzomes. Each, 20c; 3 for 50c, F. O. B., Moscow.

Fruit Trees

All of our stocks of fruit trees are large healthy whips, well rooted, and of best grade.

PRICES F. O. B. MOSCOW

APPLES — Gravenstein, Delicious, Wagener, Rome Beauty. Each, 60c; 10 for $5.50.

CHERRIES—Bing, Royal Ann, Lambert, Black Republican, Early Richmond. Each, 75c; 10 for $7.00.

PEACHES—Early Elberta, J. H. Hale, Triumph. Each, 75c; 10 for $7.00.

APRICOT—Moorpark, Royal. Each, 75c; 10 for $7.00.
Our Seed Grades

Our seed grades are established with our regular customers but for the benefit of our new customers, let us describe them again.

**Our “SUPREME” brand** is the nearest perfect that can be offered. This seed contains very few, if any, weeds, and then only those considered as harmless. It has an excellent color, is free of inert matter, and has a high vitality.

**Our “IDEAL” brand** is just as free of noxious weeds, but may contain a few harmless weeds, or a slight mixture of other crop seeds that are valuable in a hay crop. A saving in the cost of seed can be had if your crop is to be used for hay or pasture by purchasing this brand.

We could offer you cheap seed at lower prices, seed that contained noxious weeds, weather damaged seed, mixtures and the like, but we want you to feel free to order from us each season. We will endeavor to give you the best values for your money that can be offered. Remember that a COPY OF STATE TEST OF SEED WILL BE SENT ON REQUEST.

Alfalfa

**CULTURE**—Alfalfa is a principal crop, grown for hay on irrigated land and can be grown profitably on non-irrigated land where the rainfall is sufficient to produce one or more crops.

On irrigated land alfalfa can be seeded in the early spring or sown on land that has grown a crop of winter wheat after the wheat has been harvested, planting during August or early September. In non-irrigated sections alfalfa can be planted as early in the spring as the seed bed can be prepared sowing from 8 to 12 pounds per acre. Many soils throughout the Pacific Northwest are deficient in sulphur and it is profitable to apply about 200 lbs. of Gypsum or land plaster to the acre in the late fall or early spring. Land which is to be seeded to alfalfa in the spring should be given a treatment of land plaster the previous fall.

**Grimm Alfalfa**

Grimm Alfalfa is a distinct variety which originated in Minnesota. It produces a heavier and more branching root system than the common variety and is more resistant to winter killing and late spring frost. It yields slightly heavier than the common variety and produces variegated flowers. Grimm alfalfa should be used where winter killing is a problem but elsewhere the common is just as satisfactory.

**STATE CERTIFIED (Blue Tag)**—This grade of Grimm Alfalfa seed has been inspected in the field for trueness to name and after the seed is threshed and recleaned it must show a purity of 99.5% or better and be free of noxious weeds. If you are planning on growing alfalfa for seed purposes you should use this grade of seed. See insert sheet for prices.

**STATE CERTIFIED (Red Tag)**—This grade of seed has passed the field inspection for trueness to name and must have a purity of 99%, be noxious weed free with not more than 1-16 of 1% of sweet clover. This grade is just as satisfactory for the production of hay as the Blue Tag grade and can be purchased at a low price. See insert sheet for prices.

**Sow Your Alfalfa with a WILL-BO SEEDER**

The Wil-Bo Seeder is made of best quality tin, with 27-inch tube, to which is attached a heavy drill bag. At the upper end of the tube is a regulator which is graduated to measure the amount of seed being sown. The bag is carried over the left shoulder by a heavy strap and the tube held in the right hand, swinging it at a low angle to permit the seed flowing from the end of the tube. By throwing the seed to cover 3 rods at a round, the rate of seeding is accurately measured. It works in windy weather as well as in good, and an operator can cover from 40 to 60 acres a day. The Wil-Bo will seed all clovers, alfalfa, bluegrass, timothy, and other small grass seeds. Price, postpaid, $1.40 each.
Sweet Clover

CULTURE—Sweet Clover is one of the best crops for soil improvement and for dry land sections and can also be grown under irrigation. In non-irrigated sections it can be sown with a nurse crop of peas or seeded alone in early spring. In general, fall seeding throughout the Pacific Northwest is not satisfactory. In some localities it is possible to secure a good stand of alfalfa by seeding a mixture of sweet clover and alfalfa seed. The alfalfa becomes established by the time the sweet clover is gone. If continuous pasture is desired an area should be seeded each season to sweet clover, pasturing the old crop from May until the middle of the summer, then pasturing the new crop until fall. The danger from loss of livestock on sweet clover pasture can be reduced by supplying the animals with plenty of dry feed during the pasture season. If the old crop of sweet clover becomes too coarse and woody it may be cut and allowed to cure in the field and will be eaten readily.

BIENNIAL YELLOW SWEET CLOVER—A variety with finer stems and more spreading in habit of growth. It blooms during the second year about two weeks earlier than the white variety. The flowers are yellow in color.

SUPREME—See insert sheet for prices.

OUR SWEET CLOVER SEED IS SCARIFIED WHEN NECESSARY

BIENNIAL WHITE SWEET CLOVER—This variety grows to a height of 6 or 7 feet during the second season, bearing white flowers. It is desirable for hay or pasture during the first season, but must be cut when not over 30 inches tall the second year to produce a good quality of hay. A high stubble must be left after the hay is cut the second year, as the late growth starts from buds on the old cut stems rather than from the crown as in the case of alfalfa.

SUPREME—IDEAL—See insert sheet for prices.

Clovers

MAMMOTH RED—Similar in appearance to the Medium Red Clover but growing larger and maturing later in the season. It reaches the best stage for hay along with timothy. We suggest a mixture of 6 lbs. of clover to 10 lbs. timothy per acre. The seed of this variety cannot be distinguished from that of Medium Red Clover.

SUPREME—See insert sheet for prices.

MEDIUM RED CLOVER—This common variety is generally grown in mixtures with other grasses for hay or grown alone. If grown alone 8 to 12 pounds of seed is used while in mixtures 4 to 6 pounds is the usual rate.

SUPREME—See insert sheet for prices.

ALSIKE CLOVER—This clover is generally sown on low ground or ground which remains wet fairly late in the spring. It can be sown alone at the rate of 4 to 5 lbs. per acre or in mixtures with timothy, Red Top, and Meadow Fescue. For pasture we suggest a mixture of 5 lbs. timothy, 3 lbs. Red Top, 5 lbs. Meadow Fescue and 3 lbs. Alsike.

SUPREME—IDEAL—See insert sheet for prices.

WHITE DUTCH CLOVER—Used principally for lawn seeding but often used in pasture mixture or irrigated land. From 2 to 4 lbs. per acre is used for pasture mixtures.

SUPREME—See insert sheet for prices.

Vetch

WINTER OR HAIRY VETCH—A fine legume for poor land for soil improvement. It is often grown in mixture with winter wheat or fall rye for hay or pasture, and planted alone as a cover crop for orchards. If sown alone, 30 to 40 lbs. are used per acre, or in mixtures with fall grain using one bushel of grain to 25 lbs. of vetch. The grain crop aids in supporting the vetch vines. More vetch should be grown for seed purposes on the lighter timber soils of the northwest.

SPRING OR COMMON VETCH—This vetch produces larger seeds than the winter variety and should be planted in early spring, using 40 to 50 lbs. per acre. It makes a fine fertilizer crop and can be used for hay or pasture as well.

Rape

DWARF ESSEX RAPE—Rape is used for hog and sheep pasture, making a rapid growth of succulent feed. It is quite hardy and withstands frost. It is sown in early spring and also late summer, planting in rows to permit cultivation or sown broadcast. From 5 to 12 lbs. of seed is required per acre, depending upon the method of seeding.

Grasses

TIMOTHY—Timothy hay is in demand by lumber camps for horse feed. It grows best on low land which is well drained and free of surplus moisture. If sown alone use from 10 to 12 lbs. per acre and from 5 to 7 lbs. in mixture with other grasses.

SUPREME—See insert sheet for prices.

ORCHARD GRASS—Orchard grass should be used in hay and pasture mixtures for dry land as it is hardy and drouth resistant. It starts early in the spring and produces pasture during the early fall. If sown alone 14 lbs. is required per acre. We suggest a mixture of orchard grass 5 lbs., Brome 5 lbs. and Slender wheat 5 lbs. per acre for a permanent pasture on non-irrigated land, adding a few pounds of clover if a legume is desired.

SUPREME—See insert sheet for prices.

BROME—Brome grass is a hardy sod-forming grass, very drouth resistant, and stands tramping. It is very palatable and nutritious, and may be sown in mixture with Orchard and Slender wheat or in mixture with alfalfa.

SUPREME—See insert sheet for prices.

RED TOP—A fine stemmed hardy grass for wet land. If sown alone 6 to 8 lbs. per acre are used. For a pasture mixture use 3 lbs. Red Top, 5 lbs. Timothy, 5 lbs. Meadow Fescue, and 3 lbs. Alsike per acre.

SUPREME—See insert sheet for prices.

MEADOW FESCUE—A very hardy long-lived grass growing well on wet land as well as drier soils. It makes excellent pasture or hay. It requires about 15 lbs. per acre when seeding alone or 5 to 8 lbs. in mixture with other grasses.

SUPREME—See insert sheet for prices.

SLENDER WHEAT—A native grass of the northern Great Plains and is very drouth resistant. It grows in bunches, maturing with timothy. The plants are very erect, leafy, and the heads small and slender of wheat-like appearance. From 12 to 15 lbs. per acre should be used when seeding alone or 5 to 10 lbs. in mixture.

SUPREME—See insert sheet for prices.

SUDAN GRASS—An annual grass suitable as a catch crop in areas where the growing season is warm and entirely free of summer frosts. It may be drilled in rows wide enough apart for cultivation. This method requires 5 lbs. of seed per acre. If drilled for pasture or broadcast, from 25 to 30 lbs. are required.

SUPREME—See insert sheet for prices.

Sow your Grass Seed with a Will-Bo Seeder.

See page 34 for description.
Lawn Grasses

PREPARING THE LAWN

The majority of people who desire a new lawn generally seed a mixture of Blue Grass and White Clover. Such a mixture is satisfactory but does not produce the velvet-like appearance of some of the newer grasses which are being used in the best lawns.

In preparing the seed bed the soil should be thoroughly worked to insure against its settling and the surface should be loose enough so that the seed will germinate readily. If the soil is light and sandy granulated Peat Moss should be mixed with the surface soil. Lawn grass can be seeded very early in the spring and in many localities early fall seeding is satisfactory. If it is impossible to keep the surface moist by sprinkling several times during the day, a light covering of straw or lawn clippings will protect the surface from baking. After the grass seed has germinated this cover can be removed. It requires about 1 lb. of lawn grass seed to 400 square feet of area. If you desire a mixture of grass we suggest using our Supreme Lawn Mixture which is made up of the best grade of grass seeds.

We believe that Bent grass should be used more generally for lawns, seeding it alone. An application of Ammonium Sulphate fertilizer used at the rate of 5 lbs. to 1000 square feet, followed by sprinkling will increase the vigor of the grass and reduces the dandelions and other weeds generally found in lawns.

KENTUCKY BLUE GRASS—One of the most popular grasses for lawns. It produces a heavy sod, is winter hardy, and grows well where plenty of moisture is available. May be used alone or in combination with Bent Grass and White Dutch Clover.

SOUTH GERMAN MIXED BENT — A mixture of Bent grasses used for golf greens and lawns. This grass stands shading and makes a very firm sod. The foliage is fine and velvety when kept clipped.

ASTORIA BENT—This species of Bent grass was discovered in the fields near Astoria, Oregon and was given that name. It is one of the best species of Bent as the leaves are very fine in texture and dark green. This Bent does well on high ground where moisture can be supplied and makes a beautiful sod.

CHEWINGS FESCUE—A New Zealand grass of fine grayish green foliage, which is very tough and wiry. It is used in mixtures on golf fairways and on lawns subject to heavy wear. This grass must be clipped often and given an abundance of water so that it will retain its color and heavy turf growth.

WHITE DUTCH CLOVER—Should be used in mixtures for lawns in need of soil improvement. This clover is a long lived perennial and generally re-seeds sufficiently so that it increases yearly.

SUPREME LAWN MIXTURE — This is our own mixture developed after careful trials. We believe it best for general purposes, as it makes a fine velvety lawn that withstands hard use. It is composed of the grasses listed above, in the right proportion for best results. This mixture is made up from the best stock and does not contain chaffy seed.

Sow your Grass Seed with a WIL-BO SEEDER. See page 34 for description.
Sunflowers

Sunflowers may be used as a silage crop at higher elevations than corn, as they withstand more frost. Experiments show that the quality and feeding value of the silage is comparable to that made from well matured corn. Under similar conditions sunflowers will outyield corn, but are somewhat more expensive to harvest. Sunflowers, when grown for silage, may be drilled thickly in the row by the use of a grain drill, stopping up the drills to permit cultivation of the crop. They may be sown with a corn planter, spacing the plants from 8 to 10 inches in the row. If a seed crop is desired the plants should be spaced at least two feet in the row.

MAMMOTH RUSSIAN—One of the largest varieties with a heavy growth of leaves and large heads. The seeds are striped with black and gray color.

Field Corn

7 to 8 pounds of seed required per acre.

Our selection of corn varieties is made to meet a wide range of growing conditions. It is impossible for us to produce all of our seed corn locally as climatic conditions do not permit the maturity of all of the varieties listed. The remainder of our seed comes from sections where climatic conditions are as nearly as possible to those in this area.

RUSTLERS WHITE DENT—Our stock seed was secured from the Agronomy Department of the University of Idaho where it has been under constant selection and improvement for many years. It is early in maturity, develops a good growth of stalk and medium size ears.

NORTHWESTERN DENT—Because of its dwarfed habit of growth this variety of corn is best suited to hogging off and for pasturing. The ears are borne close to the ground, the stalks 4 to 5 feet in height. The grains are red with yellow-white caps.

THAYER YELLOW DENT—Our strain of this variety was developed by the Agronomy Department of the Washington State College and is very early, producing a heavy yield of forage. One of the best early varieties for this section.

MINNESOTA NO. 13—A familiar variety developed in the northern part of the corn belt. It is hardy, producing a good leaf growth and nearly as early as Rustler and Thayer.

PRIDE OF THE NORTH—This corn is medium early in maturing, producing a heavy yield of silage but requiring a somewhat longer growing season than Thayer Yellow Dent. The ears are larger than those of Minnesota 13 with a greater depth of grain.

WISCONSIN WHITE—This corn was originally developed in Wisconsin and matures with Minnesota 13. The ears are fairly large in size with a good depth of grain.

REID'S YELLOW DENT—This corn is grown extensively in the irrigated sections of the northwest where the growing season is long and the weather hot. It will not mature at elevations above 2000 feet but could be grown for late summer feed. The ears are long with light yellow lemon grains.

Spring Grains

Wheat

RED BOB'S — A wheat similar in type of grain to Marquis but a few days earlier in maturity. It yields well on dry land and is grown at high elevations as well as low elevations.

Oats

MARKTON—A smut resistant white oat which has produced maximum yields throughout the northwest on irrigated as well as non-irrigated land. It is medium late in maturity, ripening with Idamine. The grains are medium in size, with a very thin hull, producing very few double grains.
Flax

Flax is grown to a limited extent throughout the northwest for grain. In the Willamette Valley in Western Oregon, it is grown for fibre. It should be planted on land free of weeds after frost danger is past, seeding about 30 lbs. per acre.

Barley

White Hulless—White Hulless Barley is grown for hay as well as grain. It can be planted with peas and grown for silage as well. Because of its being beardless it is desirable as a hay crop.

Beardless—This barley matures early and is used for hay and for silage. The grains have short points at the top instead of long barbed-like beards.

Rye

Winter Rye—Winter Rye is often planted in the spring for pasture. Some growers sow 20 to 30 lbs. Winter Rye with Sweet Clover in the early spring to reduce the chance of bloat in live stock and to increase the feeding value of the pasture.

Spring Rye—Similar to the Winter variety except that it matures a grain crop when planted in the spring. The straw is not so heavy as in the winter variety but the grains are similar in size.

Field Beans

Robust Pea Bean—The Robust Bean was developed by the Michigan Experiment Station and is resistant to many diseases which reduce the yield of beans. It is a white bean suitable for commercial market. Our stock of seed was grown locally and is acclimated to conditions in the northwest.

Michigan Pea Bean—This small white bean is a variety commonly grown in Michigan for commercial dry market. Our stock of seed was grown from seed imported from Michigan last year.

Field Peas

All of our peas are thoroughly fumigated and cleaned to remove weevil and are put up in excellent condition for seed. You cannot afford to plant seed that is not treated and properly cleaned.

Alaska—An early maturing pea with slender vines growing to a height of 2 feet. The pods are straight, blunt, and well filled, all maturing at about the same time. The seed is smooth, round, dimpled, and of light blue color.

Blue Bell—The plants of this pea are more stocky in habit of growth and later than the Alaska. The pods are larger and produced in clusters toward the top of the plant. The seeds are large, smooth, and of light blue color.

White Canada—A fine variety for commercial peas as they yield well and produce a small, smooth yellow seed of good quality.

White Marrowfat—A taller late pea with very large white seed.

Mixed Peas—If you are in need of inexpensive pea seed for hog pasture or stock feed, these peas will meet your requirements. They are a mixture of smooth and wrinkled peas, carefully cleaned and fumigated and will give you as good a return as high priced seed for the above purpose. See insert sheet for prices.
Opinions of Experienced Users

Semesan is recognized by the U. S. Department of Agriculture and the Green Section of the U. S. Golf Association as the best fungicide for preventing and controlling both large and small "Brown Patch" of grasses.

In Southern Idaho, Semesan-treated beans, with their 20 to 40 per cent increased yields, so convinced prominent growers that they unite in saying they: "will always use Semesan for treating bean seeds, as well as their other crops."

Florists write us such tributes as: "We used Semesan on poinsettia cuttings last summer with excellent results"; and "My Semesan-treated aster seeds gave an almost perfect stand as nearly every seed germinated."

The U. S. Department of Agriculture's Circular No. 376 recommends treatments with Semesan as the most successful means known for preventing and controlling the "Brown Gall" disease of apple grafts.

The U. S. Department of Agriculture, in collaboration with the Illinois and Iowa State Experimental Stations, demonstrated that Semesan Jr. was a most effective dust disinfectant for controlling the diseases and increasing the yields obtained from infected field and sweet corn seeds.

The Idaho Agricultural Experiment Station reported that Semesan Jr.: "when applied to the uncut sprinkled tubers (potatoes) at the rate of three ounces to the bushel gave better control under field conditions than any other treatment tested."

Semesan—This modern disinfectant can be applied in either the liquid or convenient dust form to prevent or control effectively a most diversified variety of parasitic diseases and fungoid growths borne by seeds, seed pieces, plants, grafts, cuttings, the soil, manure and other material. Semesan is harmless to seed and plant life but extremely poisonous to diseases and fungus organisms. It generally also hastens germination, produces sturdier plants, promotes earlier maturity and increases both the quality and quantity of crop yields.

Semesan Jr.—A less expensive but equally effective form of Semesan for the dry dust disinfection of both field and sweet corn seeds against the ear, root and stalk rots. Under Government-conducted field tests, with Diplodia and Gibberella infected seeds, Semesan Jr. successfully prevented or controlled these diseases and at the same time increased the yields from 10 to over 40 per cent.

Semesan Bel—Applied to whole or cut seed potatoes, either as a dry powder or a whitewash-like water mixture, Semesan Bel will prevent or control the common seed-borne potato diseases. In widely separated potato-growing sections it has caused quicker sprouting, earlier maturity and greater yields.

The U. S. Department of Agriculture, in collaboration with the Illinois and Iowa State Experimental Stations, demonstrated that Semesan Jr. was a most effective dust disinfectant for controlling the diseases and increasing the yields obtained from infected field and sweet corn seeds.

The Idaho Agricultural Experiment Station reported that Semesan Bel: "when applied to the uncut sprinkled tubers (potatoes) at the rate of three ounces to the bushel gave better control under field conditions than any other treatment tested."

Semesan Disinfectants Make Good Seeds Grow Better—Send for Free Booklet. Treat Your Seed Potatoes with Semesan Bel to Control Rhizoctonia, Scab, and other surface borne diseases.
SPRAYs FOR KILLING WEEDS

Morning Glory, Canada Thistle, Blue Lettuce, Russian Knapweed, and other perennial weeds must be eradicated, as they continue to spread and eventually reduce the productive ability of the farm.

Various chemical sprays have been tested for the eradication of these weeds. A few general conclusions have been made as a result of these tests:

1. Do not spray too early. Allow the plants to become well matured so that the roots are tough and fibrous. Do not cultivate the infested area during the early part of the season before spraying.

2. Better results are secured by spraying the plants when the soil is dry.

3. Soak the stems thoroughly, as the chemicals are absorbed by the stems and carried to the roots, resulting in a kill.

K—M—G

Kills Morning Glory

This chemical weed killer is manufactured in liquid form and is a poisonous corrosive chemical. It is used by diluting it with 16 parts of water to 1 of K-M-G. Full directions for killing perennial weeds are furnished with the chemical.

Write for booklet, "The Eradication of Wild Morning Glory, Canada Thistle, Alkali Mallow, and Other Perennial Weeds." It's free.

Price F. O. B. Moscow

1 gal., wt. 20 lbs... $2.75
5 gal. drum, wt. 80 lbs... 11.00
10 gal. drum, wt. 150 lbs... 17.00
50 gal. in 10's, wt. 1500 lbs... 77.50

SODIUM CHLORATE

Sodium Chlorate is a dry crystalline chemical which is sometimes used for killing perennial weeds. It is used at the rate of 4 pounds to 5 gallons of water, spraying the plants thoroughly. It is non-poisonous, but is inflammable, so that care should be taken to keep the spray from clothing and shoes, as friction may cause it to ignite.

Price F. O. B. Moscow. 112 lb. drum, $16.50. Broken lot, 20c per pound.

Sprayers

HUDSON NEW FAVORITE—A four gallon brass tank, with a brass pump. The discharge hose is attached to the top of the tank by a curved tube. A 12 inch brass extension rod is included with automatic shut-off valve and a special nozzle for general spraying. This sprayer will handle chemical weed sprays as well as general orchard, garden, and barn spraying. Carton wt. 11 lbs. Each, $9.00, F. O. B. Moscow.

HUDSON NEW JUNIOR—A smaller sprayer, similar in construction to the Favorite, but with a capacity of 2½ gallons. Carton wt. 8½ lbs. Each, $7.50, F. O. B. Moscow.

HUDSON MODOC PUMP—A double acting spray pump which can be used with an ordinary water bucket or other container for the liquid. A malleable iron foot rest holds the pump while in action. 5 ft. of hose and a 12 inch extension rod and fog nozzle are included. Carton wt. 6 lbs. Each, $4.25, F. O. B. Moscow.

FOUR FOOT BRASS EXTENSION ROD. Used with the Favorite or Junior sprayer. Each 90c, F. O. B. Moscow.

BORDEAUX NOZZLE — A brass nozzle with adjustable opening, so that the spray material can be regulated. This nozzle should be used in spraying K-M-G. Each, $1.00, F. O. B. Moscow.

HUDSON IDEAL SPRAYER—This portable spray outfit is just the kind you need for spraying large areas of weeds. It has a 15 gallon brass tank, a barrel pump capable of 200 lbs. pressure. Heavy steel tubing forms the handles and frame and an 18 inch wheel is used, providing easy traction. 6 feet of spray hose and a 4 ft. extension rod and angle spray nozzle, make a handy outfit for general use. Wt. ready for shipment, 75 lbs, without pressure tank shown. Each, $32.35, F. O. B. Moscow.

HUDSON MIDGET — A heavy tin sprayer, made of heavy tin for use around the home. Wt. half lb. Each 35c, F. O. B. Moscow.

Write us for Prices of Hudson Repairs and Extras.
Cyan-O-Gas

Many methods for the control of the Columbian Ground Squirrel have been tried with varying success. The best means today and the surest is the use of Cyan-O-Gas. This material is a product of Calcium Cyanide, especially prepared for this purpose. The only equipment you need is a long-handled spoon that will hold two ounces of the cyanide. Throw a spoonful of the cyanide into each burrow, covering the field thoroughly. Any burrows missed should be treated within a few days. The soil moisture combines with the material producing a poisonous gas that kills all squirrels. Nearly one-half a million pounds has been used effectively in the Palouse.

Cyan-O-Gas can only be shipped by express or freight.

Prices F. O. B. Moscow. Cannot be mailed.

SIZE CONTAINERS

1 lb. 5 lbs. 25 lbs. 100 lbs.
Granular ................................ 75e $1.75 $5.00 $20.00
“A” Dust .............................. 75e $2.00 $5.00 $20.00

Peat Moss

Peat Moss is being used extensively for poultry litter, for improvement of heavy soils, hotbeds, and general garden use. This moss is a mixture of plant growth, which has partially decayed and is taken from the peat moss beds in Europe. It also furnishes some plant food to growing plants.

CHICK PEAT—This grade of peat is used primarily for litter in poultry houses. It spread over the floor to a depth of 2 to 3 inches, it will absorb the droppings and moisture which collect in the poultry house, keeping the floor dry. This litter is excellent for use in the garden, flower beds, and for mulching shrubs after removal. This grade of moss can also be used as it comes from the bale, for mixture with the garden soil.

Bale about 140 lbs. $4.50 F. O. B. Moscow. Bale only.

GRANULATED PEAT—Granulated peat is used in mixture with the soil for seed boxes, and to lighten garden soil where the coarser grade of peat cannot be used. 25 lb. bag, $1.00, F. O. B. Moscow.

Fertilizers

NITRATE OF SODA (15%)—A readily soluble form of nitrogen for fruit trees, gardens, etc. Apply 5 lbs. per tree in early spring or 200 lbs. per acre on grass plots. $4.50 per cwt. 5c per lb. F. O. B. Moscow.

AMMONIUM SULPHATE (20%)—This fertilizer is used for bent grass lawn, greens, etc., where a quick acting acid reacting fertilizer is needed. It is also used to acidify the soil, making it less favorable for weed growth. Use 5 lbs. to 1000 square feet, dissolving in water, following with irrigation. Repeat application every two weeks. $4.00 per cwt. 5c per lb. F. O. B. Moscow.

ACID PHOSPHATE (17%)—Produces a healthy growth of crops where the soil is deficient in phosphorus. Use 200 lbs. per acre. Fine for shrubbery. $2.00 per cwt.; 3c per lb. F. O. B. Moscow.

SUPER PHOSPHATE (44%)—More highly concentrated phosphate. Use 100 lbs. per acre. $4.50 per cwt. 5c per lb. F. O. B. Moscow.

AMMONIUM PHOSPHATE (20%)-A dry highly efficient combination for quick results. Best for ferns, roses, gardens, and shrubbery. Use 5 lbs. per 1000 square feet dissolved, followed by irrigation. $3.00 per cwt.; 10c per lb. F. O. B. Moscow.

POTASH (44%)—Hasest maturity of vegetables and improves the quality of fruits. Use 100 lbs. per acre. $15.00 per cwt.; 5c per lb. F. O. B. Moscow.

STEAMED BONE MEAL—This product has been steam treated to make the phosphorus readily available. Use for shrubbery, bulbs, lawns, and gardens. Apply to the surface around the plants and work into the soil. Granulated at 25 to 50 lbs. per 1000 square feet. 25 lb. bag, $2.00, F. O. B. Moscow.

SHEEP GUANO—Pulverized dry sheep manure, prepared for garden use. Use for vegetables. Use from 10 to 15 lbs. to 1000 square feet. 25 lb. bag, $2.00, F. O. B. Moscow.

GYPSEM OR LANDPLASTER

There is no fertilizer that will stimulate the yield of legume crops more than gypsum. This is the case on all soils where sulphate is limited. The majority of soils throughout the Pacific Northwest are deficient in available sulphur and this is supplied in the gypsum. While lime (calcium carbonate) will sometimes benefit legumes where the soils are acid, the application of lime in most cases in this section does not increase the yield sufficient to offset the expense of the lime. In the case of gyspum applied to alfalfa, sweet clover, red clover, and other legumes, the yield is often doubled.

Gypsum should be applied in the fall or early spring, broadcasting about 200 lbs. per acre. If this is done at the time the legume is seeded, it will show a benefit in yield for a number of seasons.

We can supply you with Ben Franklin Gypsum packed in 100 lb. paper bags. 100 lb. bag 50c; 1 ton, $15.00, F. O. B. Moscow.

MIXED FERTILIZERS

MORCROP (6-1-4)—Special lawn fertilizer for top dressing the turf during the growing season. Use from 25 to 50 lbs. per 1000 square feet. Apply several times during the growing season, water well after each application. 50 lb. bag $1.75, F. O. B. Moscow.

GARDEN FERTILIZER (5-10-4)—A complete fertilizer for general garden use. It is suitable for flowers as well as vegetables. Use from 10 to 15 lbs. to 1000 square feet. 25 lb. bag, $2.00, F. O. B. Moscow. 10 lb. bag, $1.00, F. O. B. Moscow.

FERTILO (6-8-4)—A mixed preparation for potted flowers or small gardens. 2 lb. pkg., 40c, F. O. B. Moscow.
Bee Supplies

Our hives are made of the best grade of red cedar. The body is of dovetail construction and includes the brood chamber brood frames, division board, etc. For extracted honey, the half story super includes the Hoffman shallow frames, but not the wax starter. The supers for comb honey include the frames for holding the honey sections only.

Each 5 K. D. Wt.
8 frame 1¼ story (comb) $4.50 $21.00 130 lbs.
8 frame 1½ story (ext.) 4.00 19.00 100 lbs.
8 frame supers comb without sections 1.15 5.25
8 frame supers ext. without starter 1.10 5.00
Empty super chamber .60 2.75
8 frame comb super with sections 1.95 9.00

SECTION HOLDERS

These holders are composed of two end blocks, a bottom strip cut out to hold the honey sections. 8 for 50c; 50 for $2.75; 100 for $5.00, F. O. B. Moscow.

SEPARATORS

Thin wood layers to use between each row of honey sections, so that the comb will be built even along the sides. 8 for 20c; 50 for 90c; 100 for $1.65, F. O. B. Moscow.

HOFFMAN FRAMES

Hoffman frames are constructed so that wire can be stretched across the opening and wax foundation imbedded. The deep frames are used in the brood chambers, while the shallow frames are used in the supers.

Deep Frames postpaid 3rd zone—Each, 8c; 50, $3.00; 100, $5.75.

Shallow Frames postpaid 3rd zone—Each, 8c; 50, $3.00; 100, $5.75.

HONEY SECTIONS

Our honey sections are made of the best quality of bass wood. Postpaid 3rd zone.

Honey sections—25 for 50c; 50 for 95c; 100 for $1.80.

QUEEN and DRONE TRAPS

Prevent swarming and hold queen so that she may be transferred to new hive. Each, $1.00, postpaid 3rd zone.

BEE SMOKERS

The Junior Smoker is of compact build and rigid construction so that it will give excellent results. Each, $1.25, postpaid 3rd zone.

WAX FOUNDATION

Wax foundation starter should be used in the brood frames as well as supers. Its use increases the amount of honey made during the season.

BEE VEIL

Root's Improved—Made of cotton tulle with silk tulle face. Each, $1.30, postpaid 3rd zone.

Globe Veil—A light weight veil made with bars to keep the veil away from the head and face. Each, $1.65, postpaid 3rd zone.

BEE GLOVES

Gloves made of heavy oil treated canvas. Pair, $1.35, postpaid 3rd zone.

TINNED WIRE

Tinned wire is used across the brood frames and extracting supers to hold the wax foundation. ½ lb. spool, 25c; ½ lb. spool, 40c; 1 lb. spool, 60c, postpaid 3rd zone.
Incubators and Brooders

Why take a chance on an inferior machine when you can buy a QUEEN at Competitive prices?

QUEEN PRICES ARE REDUCED

Prices on the Queen line of incubators and brooders have been reduced to meet the demand of the trade for a better machine at a lower price. These machines are built right, produce strong healthy chicks, and carry the Queen guarantee that they will produce results.

A list of prices on Queen equipment is given for reference. Write us for special literature and booklets describing the superior points of construction of these machines.

IF YOU WANT A MAMMOTH INCUBATOR, THE QUEEN HAS IT

Sizes 1600 to 43,000 egg capacity.

POULTRY SUPPLIES

Automatic Founts and Feeders. Made of zinc and fitted with frame into which a fruit jar can be fastened. Jars are not included.

- 5 inch pan, spring clamp: Each, 20c; ½ dozen, 80c; 1 dozen, $1.50, postpaid.
- 6 inch pan, acid proof for milk: Each, 25c; ½ dozen, $1.15; 1 dozen, $2.00, postpaid.
- Drinking Founts—1 quart metal with 6 inch pan: Each, 30c, postpaid. 2 gallon vertical fount: Each, $1.50, postpaid. ½ gallon crock-ery for milk: Each, 75c. Add postage. 1 gallon crockery for milk: Each, $1.00. Add postage.

Feed Troughs—Made of galvanized sheet mold ed to hold liquid or dry feed. Top is gable shaped to prevent waste of feed. 10 inch. Each, 30c; ½ dozen, $1.25, postpaid. 20 inch. Each, 45c; ½ dozen, $2.00, postpaid.

Grit and Shell Hoppers—Built like a mash hopper, so that grit is not wasted and feeds freely. 2 compartment. Each, $1.00, postpaid. 3 compartment. Each, $1.15, postpaid.
Mash Hoppers—A good mash hopper is necessary for feeding dry mash as it is constructed to conserve feed, keeping it clean. Hopper fastens to side of poultry house. 16 quart 12 inch. Each, $1.40, wt. 4 lbs. Add postage. 24 quarts, 24 inch. Each, $2.00, wt. 7 lbs. Add postage.

Leg Bands—Numbered Aluminum: 1 dozen, 15c; 50 for 50c; 100 for $1.00, postpaid.

Show Bands—Used for show birds. Colored celluloid plate with large number. 1 dozen, 25c, postpaid.

Spirals—Colored bands suitable for marking different age chicks or breeding stock. Easily put on and wear without fading. Colors: red, white, yellow, black, blue, pink, green, brown, dark blue, and purple. State breed when ordering.

For Mature Stock: 1 dozen, 20c; 50 for 50c; 100 for 90c, postpaid.

For Baby Chicks: 1 dozen, 15c; 50 for 40c; 100 for 75c, postpaid.

Toe Punch: A very practical marker for punching the web between the toes of baby chicks. The hole remains and enlarges with growth, making a permanent record. Many combinations possible. Each, 25c, postpaid.

The Patterson & Young Incubator Moisture Guide
A scientific, practical and reliable instrument for recording the evaporation in your incubator. Tells when to add moisture or give more ventilation. It shows the accumulated evaporation in the machine, enabling the operator to properly control moisture conditions. Attachments are included for all turning trays. Complete with directions.

Postpaid Prices. Each ............................................ $1.00

Little Putnam Stoves
A fire-safe stove for keeping the poultry drinking fountain from freezing in cold weather. Stove holds 3½ pints of oil and burns a month without refilling. Suitable for use as an oat sprouter as well. Complete directions for operation and use. Weight, 2 lbs.

Postpaid Prices. Each ............................................ $2.00

Putnam Brooder Heater
This small brooder heater is suitable for brooding a small flock of chicks, from 30 to 50 chicks of the same age. With this stove and directions you can build a brooder, which will care for your chicks with less trouble than brooding with hen. Stove will burn for ten days with one filling of oil. Complete with directions for operation. Weight, 2 lbs.

Postpaid Prices. Each ............................................ $1.75

Cel-O-Glass
Cel-O-Glass is a light weight UNBREAKABLE material that admits light almost as freely as clear glass. It is hailproof, heatproof, coldproof, and weatherproof. Cel-O-Glass is ideal for hotbed sash, cold frames, fronts, sides and interiors of greenhouses, barn windows, cellar windows, and other uses where glass is subject to strain or breakage. Frames made of Cel-O-Glass weigh only 10 lbs., and save time and labor in handling.

Cel-O-Glass lets through the health giving Ultra-violet rays of the sun which are so valuable in poultry raising. Ordinary glass absorbs these rays and does not let them pass through. Cel-O-Glass makes the chicks grow faster, lay more eggs and prevents "leg weakness."

Cel-O-Glass can be put on easily. A hammer, tacks, and an ordinary pair of shears are the only tools needed. Home-made frames may be used, thus reducing the cost of windows and sashes.

Cel-O-Glass comes in standard rolls 100 feet long by 3 feet wide and is as strong as screen wire, rustproof, and can be bent without danger of breakage. Try it yourself and you will find it very practical and a real economy.

Postpaid Prices. Per running foot .................................. 50c

Suncloth
Suncloth is a chemically treated muslin which permits light and air to penetrate. It is used for poultry house fronts, windows, or hotbeds. While it is not so lasting and permanent as Cel-O-Glass, it serves where a less expensive covering can be used. Sun-cloth is made in 30 inch width. Price 35c per running yard postpaid.

Suggestions as to Orders

HOW TO SHIP—Write your name, postoffice, state and railroad plainly on each order. If a portion of your order is to be shipped by freight or express and the remainder by parcel post, give us careful instructions as to shipping point, as freight shipments often are made to different stations from your mail address. Include extra money for freight if your shipment goes to a prepay station.

USE OUR ORDER SHEET—You will find an order sheet on the back page of this catalog. Be careful to specify the variety as well as the kind of seed, the quantity wanted and the price. Keep a copy of your order so that you will be able to check the items on your shipment.

TERMS—Personal checks, money orders or bank drafts may be sent in payment of orders. In case of small purchases, stamps may be submitted. Growing plants, bulbs, and nursery stock of seed, the quantity wanted and the price. Keep careful to specify the variety as well as the kind

We will not accept the return of any shipment until you have received our permission to return it.

PARCEL POST—All shipments of seed where possible are sent parcel post. The weight limit for zones 1, 2 and 3 is 70 lbs., for zones 5 to 8 inclusive, 50 lbs.

Poisons such as lead arsenate, Paris Green, etc., cannot be sent by mail. They are shipped by express.

We Prepay Postage on Shipments Where Specified to and Including The Third Zone.

If you are located in the 4th postal zone, add 2 cents per lb. extra to your order for postage. The 5th zone will require 4c per lb. additional; 6th zone 6c; 7th zone 8c, and 8th zone 10c. You can easily determine the extra postage by adding the total pounds and fractions on your order and include this as extra postage. Any postage not used will be remitted to you. Prices quoted in our catalog are fair to all as the customer located close to us will receive his goods at a lower net cost due to the difference in the postal rate.

QUANTITY RATES—Where 5 and 10 lb. prices are quoted on peas, beans, etc., you may take advantage of the quantity rate by including more than one variety to make 5 or 10 lbs. total.
